

## 2024 年外研社·国才杯“理解当代中国”综合能力大赛

### 省赛试题 (11.2 场)

#### Part I Read and Know (17 marks) (15 MINS)

##### Questions 1-5

Directions: Choose the best answer for each question.

1. What is the correct understanding of “草木植成，国之富也”?

- A. Vegetation is a valuable asset of a country.
- B. Only when plants are alive can the country be rich.
- C. Vegetation determines the wealth of a country.
- D. Plants herald the prosperity of a country.

2. Please complete the translation of “坚持把社会效益放在首位、社会效益和经济效益相统一”:  
to give top priority \_\_\_\_\_.

- A. to social benefits and integrate this with economic returns
- B. to the integration of social benefits with economic returns
- C. to the integration of social norms with economic benefits
- D. to society feedbacks and integration with economic benefits

3. What is the best understanding of “类族辨物”?

- A. To distinguish things by classifying them.
- B. To observe things carefully before classifying them.
- C. To classify things through their similarities and differences.
- D. To understand more about things through their classifications.

注：这道题我在考场上写错了，当时选了 C，答案应该为 A。

4. Please complete the translation of “举旗帜、聚民心、育新人、兴文化、展形象”：to \_\_\_\_\_,  
develop Chinese culture, and better present China to the world.

- A. adhere socialism with Chinese features, rally public support, cultivate new people
- B. uphold socialism with Chinese characteristics, concentrate publicity, foster a new generation of young people
- C. uphold socialism with Chinese characteristics, rally public support; foster a new generation of young people
- D. adhere socialism with Chinese features, concentrate publicity, cultivate new people

An ancient Chinese once observed: “\_\_\_\_\_.” For any country or nation to thrive, it must follow the logic of history and develop in line with the trend of the times.

—Xi Jinping: *The Governance of China* (Volume IV)

5. Which of the following sentences best fits in the blank?

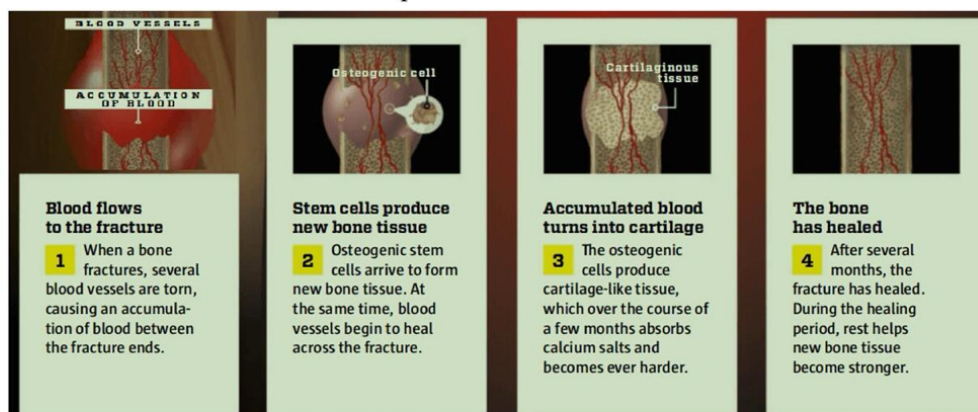

- A. One should be watchful and careful when it comes to adherence to ethics, rites and law as well as fulfilling one's due responsibility.
- B. One can tell the inside of a thing by observing its outside and see future developments by reviewing the past.

C. Starting off with a flourish is not difficult, whether in personal behavior, doing business, being an official or governing a country.

D. If achieving a good result is expected, then all kinds of hidden risks and potential dangers must be detected and prevented as early as possible.

### Questions 6-8

Directions: Read the text and answer the question.

\*Osteogenic stem cells and osteogenic cells refer to the same kind of cells.

6. Which of the following is NOT true according to the captions?

A. The healed fracture is often the weakest part of the bone.

B. Upon fracture, blood will accumulate at the site of the fracture.

C. Rest is very important to the healing of a bone fracture.

D. Osteogenic stem cells play a vital role in bone repair and regrowth.

解析：B 选项（血液会在骨折处积累）：在第 1 张图和说明中明确显示："blood vessels are torn, causing an accumulation of blood between the fracture ends"

这是正确的陈述

C 选项（休息对骨折愈合很重要）：在第 4 张图的说明中提到："During the healing period, rest helps new bone tissue become stronger"

这是正确的陈述

D 选项（成骨干细胞在骨骼修复和再生中起重要作用）：在第 2 和第 3 张图中说明成骨干细胞的作用："Osteogenic stem cells arrive to form new bone tissue" 并产生软骨样组织

这是正确的陈述

A 选项（愈合的骨折通常是骨骼最脆弱的部分）：文中没有提到这一点

相反，第 4 张图的说明表明："During the healing period, rest helps new bone tissue become stronger"

这暗示愈合后的骨骼会变得更强壮，而不是成为最弱的部分，因此这个说法是不正确的

A working semiconductor has been created from graphene (石墨烯), potentially paving the way for a new type of computer with greater speed and efficiency than today's silicon chips allow.

Graphene is a material made from a single layer of carbon atoms that is stronger than steel at comparable thicknesses. It is a good electrical conductor and is resistant to heat and acids. But a working graphene semiconductor, which can be controlled to conduct or insulate electricity at will, has evaded scientists. Such semiconductors are key to creating the logic chips that power computers.

7. What can be learned about the working graphene semiconductor from the text?

A. It makes computer chips with greater performance and efficiency possible.

B. It is known for its material strength and high thermal conductivity.

C. It means that the world will soon shift from silicon to graphene chips.

D. It is capable of conducting or insulating electricity simultaneously.

解析：文章关键信息：："potentially paving the way for a new type of computer with greater speed and efficiency than today's silicon chips allow"。这直接表明石墨烯半导体可能带来性能更好、效率更高的计算机芯片

各选项分析：

A. 正确：直接对应文章第一段的描述

准确反映了石墨烯半导体的潜在优势：可能实现更高性能和效率的计算机芯片

B. 错误：虽然文章确实提到石墨烯的强度和耐热性，但这是石墨烯材料本身的特性而不是问题所问的"工作中的石墨烯半导体"的特性

C. 错误：文章只说明了这项技术的潜力

没有提到世界会很快从硅芯片转向石墨烯芯片，这是过度推断

D. 错误：文章说半导体可以"被控制"来导电或绝缘（can be controlled to conduct or insulate electricity at will）

而不是同时具备这两种特性，这是对文章内容的误解

Gorgias of Leontini exemplified all of people's fears about what Sophists would do to the young. As a teacher of rhetoric, he showed how any argument can be made persuasive. The presence of Gorgias looms over many of Plato's dialogues in which many of the people who discuss with Socrates have been taught (or as Plato would see it, mis-taught) by Gorgias.

Gorgias is sometimes called "**the Nihilist**" because of the extremely unorthodox views he at times expounded. One of his works is a speech defending Helen of Troy when most Greeks viewed her as a seductive villain who sparked the bloody Trojan War. His most famous piece is titled *On not-being*, in which he defends the idea that nothing at all exists, or if it exists we cannot know anything, or if we do know something about existence we cannot express our knowledge. At a time when the search for knowledge occupied many philosophers, Gorgias undermined the entire purpose of philosophy.

8. What does the underlined phrase "**the Nihilist**" in the second paragraph most probably mean?

A. A person who excels at persuading others by using rhetorical devices.

B. A person who supports the idea that laws and governments are not necessary.

C. A person who holds that pursuing knowledge is the purpose of philosophy.

D. A person who clings to the belief that existence is senseless and useless.

解析：上下文分析：文章在提到"the Nihilist"这个称号后，立即解释了 Gorgias 的观点：他认为"nothing at all exists"（根本不存在任何东西），即使存在，"we cannot know anything"（我们也无法知道任何事情），即使我们知道些什么，"we cannot express our knowledge"（我们也无法表达我们的知识）

虚无主义（Nihilism）的含义：虚无主义者认为存在是没有意义和目的的  
这正好与文中描述的 Gorgias 的观点相符，他否定了一切的存在、认知和表达的可能性  
各选项分析：

A 选项：虽然 Gorgias 确实擅长修辞和说服，但这不是他被称为"虚无主义者"的原因

B 选项：文章没有提到他对法律和政府看法

C 选项：恰恰相反，文章说他"undermined the entire purpose of philosophy"（破坏了哲学的全部目的）

D 选项：最符合虚无主义的核心理念，也与文章描述他的观点完全吻合

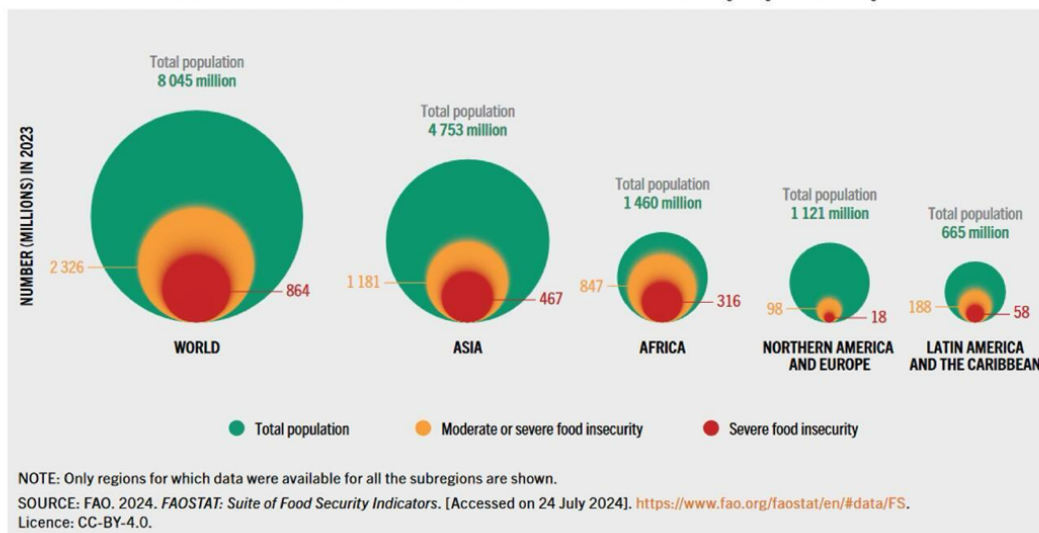

关键证据：

文章最后一句提到"Gorgias undermined the entire purpose of philosophy"，这进一步支持了他的虚无主义倾向，因为他否定了追求知识的可能性和意义。

### Questions 9-11

Directions: Read the chart about food insecurity and decide whether the following statements are True or False.

**The concentration and distribution of food insecurity by severity in 2023**

9. About 2,326 million people in the world did not have access to adequate food in 2023.

A. True

B. False

解析：2023 年，全球约有 23.26 亿人无法获得充足的食物。依据为第一张图的黄色部分，注意，这张图表类似于韦恩图，比如第一张图，红色包含于黄色部分。

10. Of the total population in the world facing food insecurity in 2023, nearly half (more than 1.1 billion) were in Asia.

A. True

B. False

解析：2023 年，全球面临粮食不安全的总人口中，近一半（超过 11 亿）在亚洲。总共是 23.26 亿人，亚洲是 11.81 亿人。

11. Of those Africans facing food insecurity in 2023, about 10 percent suffered severe food insecurity, while in Northern America and Europe the percentage was a bit lower.

A. True

B. False

解析：在 2023 年面临粮食不安全的非洲人中，约有 10% 遭受严重的粮食不安全，而在北美和欧洲，这一比例略低。第三张图可以看到，粮食不安全的非洲人数量为 847 million，而严重的粮食不安全的数量为 316 million， $316/847 \approx 37\%$ 。

## **Part II Read and Reason (10 marks) (15 MINS)**

**There are several texts on different subjects in this part. Read the directions and answer the questions.**

### **Questions 12-13**

Directions: Read the text and answer the questions.

As an investigator in the problems of “Chinese Thought and Institutions,” while one may find much useful information by patient and intelligent examination of Chinese records from the original sources, in order to make his search really up-to-date he will have to supplement his documentary study with some direct observations. These supplementary evidences are especially needed in the studies of “Chinese Thought,” about which documentary data, in the majority of cases, may be so remote from realities that they can hardly reveal its true or complete nature. They should at least be checked with more experimental investigations which ought to be obtainable by studying the Chinese mental process in actual operation. The way to do it is of course somewhat delicate, and extremely difficult; it involves many interdepartmental disciplines. If I am permitted to make some suggestion here, let me call this special recommendation the psycho-bilingual anthropological approach. The participant in this program must learn, as one of the fundamental requirements, to do his thinking in spoken as well as written Chinese; and secondly, he must be able to introspect objectively his thinking process done in the Chinese, and record it in another language with which he is equally familiar.

If I am inclined to believe that this particular group of anthropological problems of China ought to be easier for a Chinese scholar to handle, my main reason is that, a Chinese scholar is supposed to possess the initial advantage of speaking the Chinese as a mother tongue. With this initial advantage, if he acquires a thorough training in scientific method and learns his foreign language well, what he needs further will be only a spirit of intellectual adventure and a sense of this particular problem. At any rate, the time has certainly come that some Chinese scholars should study their own mental characteristics; for in addition to the scientific value and the intrinsic interest in the problems themselves, they are a part of the fountain source from which all primary data of Chinese Thought may issue. On the other hand, non-Chinese scholars who have already developed an interest in the evolution of Chinese Thought and Chinese Institution, and who, besides, are naturally more

objective in dealing with problems of this kind, have all the reasons to go to the root of the question by a more daring and direct approach as suggested above. It would be interesting, too, to find out whether introspective psychology could still revitalize its function by lending its technique to a new mode of operation in the study of the proposed thesis. In my judgement, and with all the premises as laid above, the psychological situation so created may be as appropriate as one can make for the conduct of such an experiment. Let us hope that before long, there may be some qualified and adventurous spirit who will be willing enough to try.

(From *The Beginnings of Chinese Civilization*)

12. Why are supplementary evidences especially needed in the studies of Chinese Thought?

- A. Because Chinese Thought is constantly changing.
- B. Because direct observations are more reliable.
- C. Because documentary data may be remote from realities.
- D. Because there are not enough original sources.

解析：这个答案可以直接从文章第一段找到证据："These supplementary evidences are especially needed in the studies of 'Chinese Thought,' about which documentary data, in the majority of cases, may be so remote from realities that they can hardly reveal its true or complete nature."

具体分析各选项：

- A 选项（Chinese Thought 不断变化）文章没有提到
- B 选项（直接观察更可靠）虽然文章提到需要直接观察，但这不是主要原因
- C 选项准确反映了文章所述，文献资料可能与现实相去甚远
- D 选项（原始资料不足）文章没有提到这个问题

13. What does the author think of non-Chinese scholars studying Chinese Thought?

- A. He is supportive, believing that they can bring objectivity.
- B. He is neutral but worries that they lack the necessary resources.
- C. He is critical, thinking that they do not understand Chinese culture well enough.
- D. He is skeptical about their ability to understand Chinese Thought.

解析：在文章第二段中，作者明确表示了对非中国学者研究中国思想的支持态度："non-Chinese scholars... are naturally more objective in dealing with problems of this kind, have all the reasons to go to the root of the question by a more daring and direct approach"。

具体分析各选项：

A 选项完全符合作者的观点，作者认为非中国学者能带来客观性，并支持他们采用更直接的研究方法

### Questions 14-16

Directions: Read the text and answer the questions.

"Our brains constantly predict what to expect in the world around us and the consequences of our

actions. When these predictions turn out wrong, this causes strong activation of different brain areas, and such prediction error signals are important for helping us learn from our mistakes and update our predictions. But despite their importance, surprisingly little is known about the neural circuit mechanisms responsible for their implementation in the brain,” explained Professor Sonja Hofer, Group Leader at Sainsbury Wellcome Centre (SWC) and corresponding author on the paper, “Prioritizing the unexpected: New brain mechanism uncovered.”

To study how the brain processes expected and unexpected events, the researchers placed mice in a virtual reality environment where they could navigate along a familiar corridor to get to a reward. The virtual environment enabled the team to precisely control visual input and introduce unexpected images on the walls. By using a technique called two-photon calcium imaging, the researchers were able to record the neural activity from many individual neurons in primary visual cortex, the first area in our neocortex to receive visual information from the eyes.

“Previous theories proposed that prediction error signals encode how the actual visual input is different from expectations, but surprisingly we found no experimental evidence for this. Instead, we discovered that the brain boosts the responses of neurons that have the strongest preference for the unexpected visual input. The error signal we observe is a consequence of this selective amplification of visual information. This implies that our brain detects discrepancies between predictions and actual inputs to make unexpected events more salient,” explained Dr Shohei Furutachi, Senior Research Fellow in the Hofer and Mrcic-Flogel labs at SWC and first author on the study.

To understand how the brain generates this amplification of the unexpected sensory input in the visual cortex, the team used a technique called optogenetics to inactivate or activate different groups of neurons.

They found two groups of neurons that were important for causing the prediction error signal in the visual cortex: vasoactive intestinal polypeptide (VIP)—expressing inhibitory interneurons in V1 and a thalamic brain region called the pulvinar, which integrates information from many neocortical and subcortical areas and is strongly connected to V1. But the researchers found that these two groups of neurons interact in a surprising way.

“Often in neuroscience we focus on studying one brain region or pathway at a time. But coming from a molecular biology background, I was fascinated by how different molecular pathways synergistically interact to enable flexible and contextual regulation. I decided to test the possibility that cooperation could be occurring at the level of neural circuits, between VIP neurons and the pulvinar,” explained Dr Furutachi.

And indeed, Dr Furutachi’s work revealed that VIP neurons and pulvinar act synergistically together.

VIP neurons act like a switch board: when they are off, the pulvinar suppresses activity in the neocortex, but when VIP neurons are on, the pulvinar can strongly and selectively boost sensory responses in the neocortex. The cooperative interaction of these two pathways thus mediates the sensory prediction error signals in visual cortex. The next steps for the team are to explore how and where in the brain the animals' predictions are compared with the actual sensory input to compute sensory prediction errors and how prediction error signals drive learning. They are also exploring how their findings could help contribute to understanding autism spectrum disorders and schizophrenia spectrum disorders.

14. What kind of environment did the researchers utilize to investigate brain processes?

- A. A controlled darkroom with unexpected images.
- B. A familiar outdoor setting with unexpected obstacles.
- C. A maze with hidden traps and random images.
- D. A virtual reality environment with a familiar corridor.

解析:

根据文章第二段: "researchers placed mice in a virtual reality environment where they could navigate along a familiar corridor to get to a reward"。这里明确指出研究人员使用了带有熟悉走廊的虚拟现实环境。其他选项都没有在文中提到:

A 选项提到的 darkroom (暗室) 没有出现在文中

B 选项提到的 outdoor setting (户外环境) 与文章描述不符

C 选项提到的 maze with hidden traps (带有隐藏陷阱的迷宫) 也未在文中提及

15. What is the main finding of the study regarding how the brain processes unexpected visual events?

- A. The brain focuses on expected events over actual input.
- B. The brain highlights unexpected input to make it stand out.
- C. The brain encodes differences between actual input and expectations.
- D. The brain amplifies the responses of the strongest neurons.

解析:

根据文章第三段: "Instead, we discovered that the brain boosts the responses of neurons that have the strongest preference for the unexpected visual input... to make unexpected events more salient"。这表明大脑会增强对意外输入的反应, 使其更加突出。

A 选项与文章发现相反

C 选项是文章提到的 "previous theories" (先前的理论), 但被研究结果否定了

D 选项虽提到了 amplifies (放大), 但缺少了关键的 "unexpected" (意外的) 这一要素

16. How does VIP neurons interact with the pulvinar?

- A. VIP neurons allow the pulvinar to either suppress or boost sensory responses.
- B. The pulvinar controls VIP neurons to increase prediction error signals.
- C. The two neuronal groups act independently to regulate sensory signals.

D. The two neuronal groups compete with each other for control over sensory predictions.

解析:

根据文章最后一段: "VIP neurons act like a switch board: when they are off, the pulvinar suppresses activity in the neocortex, but when VIP neurons are on, the pulvinar can strongly and selectively boost sensory responses in the neocortex". 这清楚地说明了 VIP 神经元像开关板一样, 可以让 pulvinar 要么抑制要么增强感觉反应。

- B 选项颠倒了控制关系
- C 选项说它们独立行动, 与文章描述的协同作用相反
- D 选项说它们相互竞争, 也与文章描述的协同关系不符

### Part III Read and Question (18 marks) (25 MINS)

#### Questions 17-22

Directions: Read the texts about green spaces and health and answer the questions.

#### Text A

Green spaces, according to the World Health Organization, are "all urban land covered by vegetation of any kind." This includes street trees, gardens, parks, landscaping around buildings, sports fields, flowerbeds, ponds, green entryways, green roofs, individual plants, and more. Green spaces provide long-term financial benefits as well as social and environmental gains.

Green spaces help combat urban heat, an issue that is growing through growing urbanization and the removal of natural land cover. Heat issues plague communities, leading to other problems, such as increased air pollutants, risk of illness or fatalities in susceptible populations, and increased hospital visits during times of extreme heat. Green spaces can provide shade, deflect the sun's radiation, and add moisture to the atmosphere.

People of color tend to be the most heat vulnerable. Heat vulnerability is how likely a person is to be harmed during periods of hot weather. Besides the social benefits, green spaces benefit the environment. They allow animals to move through urban environments safely, as well as provide shelter. This benefits biodiversity by allowing species to thrive in areas they otherwise wouldn't. Plants grow food that animals and humans alike can eat. Greenery also helps to sequester carbon with one tree absorbing 25 kilograms of CO<sub>2</sub> each year. During times of heavy rainfall, green spaces can also soak up water to feed plants and help to decrease stormwater runoff. Outside of urban environments, this is seen with mangroves which slow down water flows and protect shorelines during hurricanes.

Trends in the unequal distribution of urban tree cover have been correlated with income level and recognized in a number of cities around the world. In Mexico City, wealthy people have six times more opportunities than poor people to access one square meter of public space, including green

spaces. Although individual income level plays a part in green space access, the city's GDP does not seem to correlate with how much or little green space is present.

Addressing long-standing issues of unequal access to green spaces is difficult and requires systemic change. Those responsible for constructing spaces for the community, have choices regarding how much green space they want to include. If the team places high value on community health and well-being as well as general aesthetics, they may be inclined to add purposeful green spaces.

Green spaces can be created in different types of spaces, including vacant land plots that are underutilized or completely unused. The government, nonprofit organizations, or private entities can buy these pieces of land and convert them into green spaces as long as zoning laws permit it. Garnering community support for new green space projects can encourage local officials to champion these projects.

Green spaces can be added to your own home to improve indoor air quality and bolster mental health. If you have space outside, you could make your front or backyard into a green space by adding plants native to where you live. If you work at an office, you can also create green spaces there. Plants can sit on your desk or open workspaces so fellow employees can enjoy them. You may also encourage your workplace to invest in a green roof or rooftop garden. Community gardens can be created on underutilized land. This can beautify areas that were previously occupied by trash or were just barren.

### **Text B**

When did you last spend time in nature? We're not talking about walking down the street or riding in a car or bus. Perhaps you were playing in a field or hiking in a woodland. Maybe you were just lying on the ground, watching birds flit among the branches of a tree, or observing bees and butterflies as they sip nectar from flowers. If it's been a while, you might want to try it—because research shows we get big health benefits from spending time in such natural spaces.

It's not just about the health benefits of playing sports or doing other outdoor exercise. The simple act of being out in nature can make you feel better, both mentally and physically.

"The idea," explains Anne Schutte, "is that because we evolved in nature, then nature is actually where our brains operate the best." A developmental psychologist, Schutte works at the University of Nebraska–Lincoln. There, she studies the effect of nature on attention and memory. Research by her and others is now revealing that people who spend time in nature tend to breathe cleaner air. But there's more. That outdoor time also can help people once they move indoors again. They are better able to stay focused, soothe stress and much more.

Natural environments are different, she notes. Being in nature may come with potential risks, but those are few and far between. “Green spaces—the plants and the trees and so on—are thought to be more restful and relaxing to our attention,” Schutte says. So is listening to birds singing in the trees. We can let our minds wander in this environment. And that recharges our ability to focus, she says.

The benefits of nature go beyond mental health, says Marcia Pescador Jimenez. She works at Boston University in Massachusetts. As an epidemiologist, she studies the causes of disease. And she’s especially interested in how nature might help.

The lower stress levels that people experience in nature can improve physical health, in part by lowering blood pressure. Outside, people also may be more likely to socialize with neighbors. Those connections can help people feel less lonely and generally happier. They also may lead to more exercise when someone starts up a game of tag or frisbee—or maybe suggests a bike ride. Physical activity brings additional benefits, such as better sleep and a stronger immune system.

Nature itself can boost physical health in other ways, too, Pescador says. Breathing in dirty air can also boost levels of stress hormones and lead to other harmful changes. But plants, data show, can absorb some air pollutants linked to heart and lung problems.

Plants even reduce loud noises that can be stressful and perhaps even cause tinnitus, or a ringing in the ears. Here, the type of green space may make a difference. As you might expect, Pescador says, “Noise can be better absorbed by trees as opposed to grass.”

Some studies even suggest that time outside can aid our vision by giving us things to shift our literal focus—from near to far and back again.

One study looked at people recovering from surgery. Some had rooms with views of green spaces. Others didn’t. Those who could see nature got better faster. They left the hospital more than a day earlier, on average. Those with views of nature also reported feeling less pain than those without the view.

In general, “We find that greenness has a higher benefit among urban settings,” Pescador says. That’s especially true of urban neighborhoods where people have less money, she adds. When communities plant street trees or other greenery, people in these areas tend to see a boost in health.

17. Which of the following is NOT identified as a benefit of green spaces in Text A?

- A. Combating urban heat.
- B. Maintaining biodiversity.
- C. Conserving water and soil.

**D. Reducing noise level.**

解析: A. Combating urban heat (对抗城市热岛效应): Text A 明确提到绿地能够帮助对抗城市热, 提供阴凉和增加大气湿度, 因此这个选项是绿地的一个好处。

B. Maintaining biodiversity (维护生物多样性): 文中指出绿地为动物提供安全的通行环境并提供栖息地, 从而支持生物多样性, 这个选项也是绿地的益处。

C. Conserving water and soil (保护水土): Text A 提到绿地在暴雨期间能够吸收水分, 从而帮助减少雨水径流, 暗示它在水土保持方面的作用, 虽然没有明确提到土壤保护, 但可以推断出它对水土的保护作用, 因此这个选项也可以被认为是绿地的益处。

D. Reducing noise level (减少噪音水平): Text A 并没有提到绿地在减少噪音方面的作用。虽然 Text B 中提到植物可以减少噪音, 但这并没有在 Text A 中被提到, 因此这个选项是正确答案。

18. According to Text A, what is a trend in the distribution of urban tree cover?

A. It is unequally available to people of different colors.

**B. It is more accessible to wealthy ones.**

C. It is mostly concentrated in rural areas.

D. It is evenly distributed across cities of high GDP.

解析: 根据文本 A 的内容, 城市树木覆盖的分布受到收入水平的影响。在墨西哥城, 富裕人群比贫困人群在享有公共空间(包括绿地)方面的机会多六倍。虽然个人收入水平在获取绿地方面起到了一定的作用, 但城市的 GDP 与绿地的分布似乎没有相关性。这说明城市树木覆盖在富人和穷人之间的不平等分布。

选项 A 提到不同肤色的人群, 但文本主要强调的是收入水平的差异。

选项 B 强调富人更易获得绿地, 这符合文本的描述, 因为文本明确指出富人有更多机会接触公共空间。

选项 C 声称树木主要集中在农村地区, 文本并没有提到这种情况, 主要讨论的是城市内部的分布。

选项 D 认为在高 GDP 城市中树木的分布是均匀的, 但文本指出, 尽管 GDP 高, 绿地的分布并不均匀。

19. According to Anne Schutte's research in Text B, what specific advantages are linked to spending time in nature?

A. It enhances the ability to engage in competitive sports and social games.

B. It fosters greater emotional resilience and increases memory retention.

**C. It reduces the likelihood of distractions and promotes sustained focus.**

D. It decreases the need for restorative sleep by enhancing daytime energy levels.

解析: 选项 A: 它增强参与竞争性运动和社交游戏的能力

文本并没有专门提到竞争性运动或社交游戏的能力提升, 主要讨论的是自然环境对注意力和记忆的影响。因此, 这个选项不符合文本内容。

选项 B: 它培养更大的情绪韧性并提高记忆保持能力

虽然文本提到在自然环境中能够改善心理状态和注意力, 但并未具体提到情绪韧性这一概念, 也没有直接提到记忆保持能力。因此, 这个选项也不完全符合文本内容。

选项 C：它减少分心的可能性并促进持续的专注

这个选项与文本中的信息直接相关。Anne Schutte 提到，自然环境使人能够更好地专注，减少分心，帮助人们保持专注力。这与文本的主要论点相吻合。

选项 D：它通过增强白天的能量水平减少对恢复性睡眠的需求。

文本中没有提到睡眠或恢复性睡眠的减少，也没有直接关联到日间能量水平。因此，这个选项不符合文本的内容。

20. What conclusion can be drawn from the studies regarding patients recovering from surgery in Text B?

A. The presence of nature in recovery rooms correlates with increased feelings of pain and discomfort.

B. Observing green spaces has no statistically significant impact on the speed of recovery from medical procedures.

C. Patients with views of nature during recovery experience enhanced healing rates and report lower pain levels.

D. The benefits of nature on recovery are primarily psychological and do not translate into measurable health improvements.

解析：选项 A：恢复室中自然景观的存在与疼痛和不适感的增加有关。

这个选项与文本的内容相反。文本指出，能够看到自然景观的患者通常感觉到较少的疼痛，因此这个选项是错误的。

选项 B：观察自然景观对医疗程序的恢复速度没有统计学显著影响。

文本明确提到，能够看到自然的患者比那些看不到自然的人恢复得更快，并且他们出院的时间也更短。因此，这个选项也是错误的。

选项 C：在恢复期间能看到自然景观的患者经历了更快的愈合速度，并报告较低的疼痛水平。这个选项与文本 B 的研究结果一致。研究发现，能看到自然的患者恢复得更快，并且报告的疼痛水平较低，因此这是正确答案。

选项 D：自然对恢复的好处主要是心理上的，并未转化为可衡量的健康改善。

虽然文本中提到心理上的好处，但也强调了生理上的改善，例如更快的恢复和出院。因此，这个选项并不准确。

21. Which of the following ideas is held in BOTH texts?

A. Spending time in green spaces can improve both physical and mental well-being.

B. People in rural areas can benefit more from green spaces than those in urban areas.

C. People should exercise more in green spaces to see health improvements.

D. High-income urban areas experience more positive effects of green spaces.

解析：选项 A：在绿地中花可以改善身心健康。

这个选项与两篇文本的主要观点一致。文本 A 提到绿地对环境和社会健康的益处，而文本 B 则强调在自然环境中对心理和身体健康的积极影响。因此，这个选项是正确的。

选项 B：农村地区的人比城市地区的人从绿地中受益更多。

文本中并没有明确比较农村和城市居民的受益程度。文本 A 主要关注城市绿地的分布和影

响，文本 B 也未涉及农村和城市的比较。因此，这个选项不成立。

选项 C：人们应该在绿地中多锻炼以看到健康改善。

虽然文本 B 提到户外活动和运动的好处，但并未明确提出“人们应该在绿地中多锻炼”这一观点。文本 A 更侧重于绿地的环境益处而非运动，因此这个选项不准确。

选项 D：高收入城市地区的人经历更积极的绿地影响。

文本 A 提到富人比穷人更容易接触到绿地，但并未明确指出高收入城市的居民享有更积极的影响。实际上，文本 B 强调的是城市中绿地对低收入社区的健康益处。因此，这个选项并不成立。

22. Which of the following questions can be answered using information from BOTH texts?

① How do green spaces contribute to urban health and wellness?

② What specific activities can people engage in to benefit from nature?

A. Only ①.

B. Only ②.

C. Both ① and ②.

D. Neither ① nor ②.

解析【下面只是一家之言，仅作参考】：

① 绿地如何促进城市的健康与福祉？

文本 A 提到绿地的多个好处，包括帮助抵御城市热岛效应、改善空气质量、增加生物多样性、促进社区健康和福祉等。这些信息显示了绿地在城市环境中对健康和社会的积极影响。文本 B 进一步强调自然环境对心理健康和身体健康的好处，比如降低压力、改善血压、促进社交等。尤其在城市环境中，绿地的存在被认为对健康有更高的益处。

因此，文本 A 和文本 B 都提供了关于绿地如何促进城市健康和福祉的信息。

② 人们可以参与哪些具体活动来受益于大自然？

在文本 A 中，虽然重点是讨论绿色空间的定义、环境与社会的好处，但它没有明确列出具体的活动。它提到了一些**可以进行的**活动，例如在家中或办公室中创建绿色空间（比如在前院或后院种植本土植物，或在办公室放置植物），以及支持社区花园项目。**然而，这些活动并不是以“参与活动”的形式列出，而更侧重于倡导与改善绿色空间的方式。**

文本 B 则明确提到一些与自然相关的活动，比如在户外玩耍、远足、观察鸟类和昆虫等。文本强调了这些活动对身体和心理健康的积极影响。

#### Part IV Translate and Connect (15 marks) (25 MINS)

*Translate the following passage into English.*

推进中国式现代化是一项前无古人的开创性事业。我们要构建高水平社会主义市场经济体制，健全推动经济高质量发展体制机制，构建支持全面创新体制机制，健全宏观经济治理体系，完善城乡融合发展体制机制，不断开创中国式现代化建设新局面。

Advancing Chinese modernization is an unprecedented and groundbreaking endeavor. We aim to establish a high-level socialist market economy, improve mechanisms that promote high-quality economic development, build a supportive system for comprehensive innovation, enhance the macroeconomic governance system, refine mechanisms for integrated urban-rural development, and continually create new prospects for the construction of Chinese-style modernization.

## Part V Write and Create (40 marks) (40 MINS)

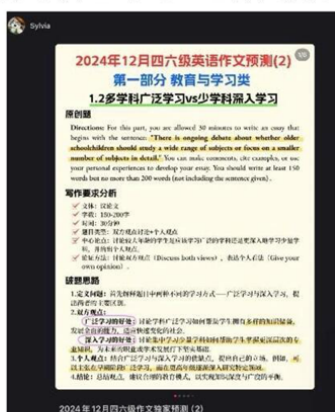

General education courses are a set of foundational classes required by most colleges and universities, aiming to provide a broad, well-rounded education. They equip students with the essential skills and knowledge required beyond their specialized field of study.

“Regardless of your industry, you are expected to tackle a wide range of work and conduct yourself professionally. General education courses help develop this sense of balance. They also help discipline you for the rigors of more challenging specialized coursework,” said a student when asked how he felt about general education courses.

“General education does have a place in high school, where students take foundational courses in subjects such as history, science and maths. In college, however, the focus should shift to specialization, as job-specific expertise is required at work and quick online searches for minor information make broad general knowledge less necessary,” said another student.

**Which student do you agree with? Write an article of between 250 and 300 words. You should state your opinion with reasons and examples.**

这一篇作文如果备考过雅思，其实应该是很容易写出来的，雅思的各大机构练习题都会出现这道题目，我们在四六级的预测的时候也写过（也算是押到题了）：

支持专精学科的：可以谈谈专精一门学科（*studying one subject in-depth/specializing in one subject area*）有哪些好处。

首先，专精一门学科可以让学生学得更加深入，更好地理解本专业的基础概念、理论和原理（*basic concepts, theories, and principles*）。扎实的专业知识基础（*a solid foundation of professional knowledge*）能让他们在求职时更容易脱颖而出，得到雇主的青睐（*gain favor from employers*）。

此外，专精一门学科可以让学生更好地掌握和运用本专业相关的技能（*the skills related to their fields of expertise*）。具备扎实的理论知识之后，学生们还需要通过大量动手实践（*hands-on experience*）和实习经历（*internships*）才能把理论运用到实践中去。

从找工作角度看，当今各个行业分工越来越细（*the increasing specialization in various industries/professions*），什么都懂一点的通才（*generalists*）也不如专精一门的专才（*specialists*）受追捧（*sought after*）。

支持通识教育的：可以谈谈通识教育（*a well-rounded/broader education*）的优点。

首先，通识教育更有利于培养学生的创造性和批判性思维（*the ability to think creatively and critically*），让学生更善于发现各种不同领域知识之间的相互联系（*the interconnections between knowledge from different fields of expertise*）。因此，接受通识教育的学生拥有更强的

学习能力，更容易适应当今快速变化的工作环境。

另外，通识教育能帮助学生更好地理解现实世界（*in a real-world setting*）中人类面临的各种问题和挑战。它们庞大而复杂（*vast and complex*），仅靠一个学科的知识很难正确理解和解决。例如，如何控制新冠疫情传播不仅是一个医学问题，还需要来自公共政策、心理、计算机等等众多领域的知识才能回答。

最后，某些类型的工作也更青睐那些知识面广的通识型人才（*versatile talents with broad knowledge*），比如作家和记者等等。

虽然 **opinion** 类题型要求立场鲜明，若能在阐明观点之后加一个短小的让步段落，简单阐述一下反方观点的合理之处，或是己方的不足之处，评委可能会因为你考虑问题全面而印象加分哦～

例文 1: In today's competitive job market, having specialized knowledge and skills is becoming increasingly important. Therefore, I strongly agree that university students should focus on developing their expertise in one subject area rather than spreading themselves thin across a broader range of subjects.

在当今竞争激烈的就业市场中，拥有专业知识和技能变得越来越重要。因此，我强烈认为大学生应该专注于发展某一学科的专业知识，而不是在更广泛的学科中分散精力。

To begin with, studying one subject in-depth allows students to gain a thorough understanding of its principles, theories, and applications. This depth of knowledge enables students to become experts in their field, making them more attractive to potential employers. For instance, a student who majors in computer science and possesses extensive knowledge of programming languages such as Java or Python would have a significant advantage over a generalist who only has a basic understanding of these languages.

首先，深入学习一个学科可以让学生深入理解其原则、理论和应用。这种知识的深度使学生能够成为该领域的专家，从而使他们在潜在雇主面前更具吸引力。例如，主修计算机科学的学生如果对编程语言如 Java 或 Python 拥有丰富的知识，将比仅对这些语言有基本了解的通才更具优势。

Furthermore, specializing in one subject allows students to develop practical skills that are specific to their field. These skills can be cultivated through hands-on experience and internships, which provide students with opportunities to apply the theoretical knowledge they have learned in real-world settings. For example, a student specializing in civil engineering can gain invaluable experience by working on construction sites, thereby becoming more competitive than someone with only a basic understanding of the general principles in this area.

此外，专注于一个学科还可以让学生培养特定领域的实践技能。这些技能可以通过实际经验和实习机会来培养，这为学生提供了在真实环境中应用所学理论知识的机会。例如，专攻土木工程的学生可以通过在建筑工地上工作获得宝贵经验，从而比只对该领域一般原则有基本了解的人更具竞争力。

However, I do acknowledge that there are benefits to a wider range of knowledge. For instance, having a broad understanding of various subjects can lead to a more well-rounded education and can help individuals think critically and creatively. Additionally, in certain industries, such as journalism, a broad knowledge base can be essential.

然而，我也承认广泛知识的好处。例如，拥有多种学科的广泛理解可以导致更全面的教育，

并帮助个人进行批判性和创造性思考。此外，在某些行业（如新闻行业）中，广泛的知识基础可能是必不可少的。

Overall, while there are merits to both positions, I believe that specializing in one subject area is the better choice for students in university education. It allows for greater expertise, enhanced career prospects, and personal satisfaction and growth.

总的来说，尽管这两种观点都有其优点，但我认为专注于一个学科领域对于大学生来说是更好的选择。这不仅可以实现更高的专业水平、提升职业前景，还可以带来个人的满足和成长。

例文 2: It is true that many argue university students should develop a specialization in one subject area rather than pursue a wider range of subjects. **While there are some merits** to this argument, I believe that a **more diverse education** is ultimately more beneficial.

确实，许多人认为大学生应该专注于某一学科的专业化，而不是追求更广泛的学科。虽然这一论点有其优点，但我相信，更为多样的教育最终是更有益的。

Firstly, although specializing in one area may make a student more knowledgeable in that particular field, it also **limits their understanding** of the world around them. For example, a student specializing in physics may become an expert in the laws of motion but might lack knowledge in other crucial areas such as history, economics, or the arts, which are essential for understanding the complexities of the world we live in.

首先，尽管专注于某一领域可能使学生在该领域更具知识，但这也限制了他们对周围世界的理解。例如，专攻物理的学生可能在运动定律方面成为专家，但可能缺乏对历史、经济或艺术等其他重要领域的了解，而这些也是理解我们所生活的复杂世界所必需的。

Secondly, a broader education provides students with a **range of skills** that are valuable in today's job market. Many employers seek graduates who can **think critically, communicate effectively, and work productively in teams**. Studying a diverse array of subjects helps develop these skills, making students better equipped to navigate the demands of the modern workplace.

其次，更广泛的教育为学生提供了一系列在当今就业市场上有价值的技能。许多雇主寻求能够批判性思维、有效沟通和团队高效合作的毕业生。学习多样化的科目有助于发展这些技能，使学生更好地适应现代职场的需求。

However, it is important to acknowledge that there are some benefits to specializing in one area. For instance, students with a deep understanding of a particular subject may be better positioned for careers that require specific expertise. Additionally, some students may have a clear career path in mind that necessitates specialized training.

然而，重要的是要承认专注于某一领域确实有一些好处。例如，对某一特定学科有深入理解的学生，可能在需要特定专业知识的职业中处于更有利的位置。此外，一些学生可能已经明确了需要专业培训的职业发展路径。

In conclusion, while developing specialist knowledge in one subject area may have some advantages, I believe that a **more diverse education** better prepares students for the challenges of the modern world and a constantly changing job market.

总之，虽然在某一学科领域发展专业知识可能有一些优势，但我相信，更为多样的教育更能帮助学生应对现代世界和不断变化的就业市场的挑战。
