

2024 年外研社·国才杯“理解当代中国”综合能力大赛

省赛真题 (10.26 场)

Part I Read and Know (17 marks) (15 MINS)

Questions 1-5

Directions: Choose the best answer for each question.

1. What is the best translation of “开物成务”?
A. To understand things and pursue one's life targets.
B. To open things and succeed in one's endeavors.
C. To open things and pursue one's life targets.
D. To understand things and succeed in one's endeavors.
2. Please complete the translation of “高举和平、发展、合作、共赢旗帜”: to remain committed to _____.
A. promoting peace, growth, competition, and mutuality
B. promoting peace, development, cooperation, and mutual benefit
C. promoting security, development, competition, and mutual benefit
D. promoting security, growth, cooperation, and mutuality
3. What is the best understanding of “百事得其道者成”?
A. One who never gives up will be more likely to succeed.
B. Profound knowledge is the basis of one's success.
C. Efforts with the right focus ensure one's success.
D. One can understand things better on the way to success.
4. Please complete the translation of “构建以国内大循环为主体、国内国际双循环相互促进的新发展格局”: to foster a new pattern of development that _____.
A. relies on the domestic economy and features domestic economic dominance
B. is focused on the domestic economy and features interaction between domestic and foreign economy
C. relies on the domestic economy and features frequent interaction between domestic and international economy
D. is focused on the domestic economy and features positive interplay between domestic and international economic flows

The essence of the people's democracy is that the people get to discuss their own affairs. **Consultative** democracy is an important way of effecting Party leadership and a model and strength unique to China's socialist democracy.

—Xi Jinping: *The Governance of China* (Volume III)

5. What does the underlined word “**consultative**” probably mean?

- A. Sometimes related to a political procedure but not normally so.
- B. Providing information on a particular subject.
- C. Giving advice or making proposals about a particular problem or subject.
- D. Being involved in a certain procedure of an affair.

Questions 6-8

Directions: Read the text and answer the question.

South Africa’s Ubuntu philosophy advocates compassion and sharing. It resonates well with the values of Confucianism—“_____”. In 2015, I participated in the Year of China activities in South Africa, and witnessed the gratifying achievements of our Year of China/South Africa programs. Last April (2023), the faculty and students of the Confucius Institute at Durban University of Technology wrote me a letter in Chinese, expressing their fondness for Chinese culture and thanking China for the valuable opportunities provided to young Africans chasing their dreams. I find it very heart-warming. Indeed, these vibrant people-to-people exchanges enhance the empathy between our peoples, and enable our friendship to be passed down from generation to generation.

6. Which of the following sentences best fits in the blank?

- A. it’s delightful to have friends coming from distant quarters
- B. love the people and all beings and seek harmony among all nations
- C. a joy shared is a joy doubled
- D. seek common ground while setting aside differences

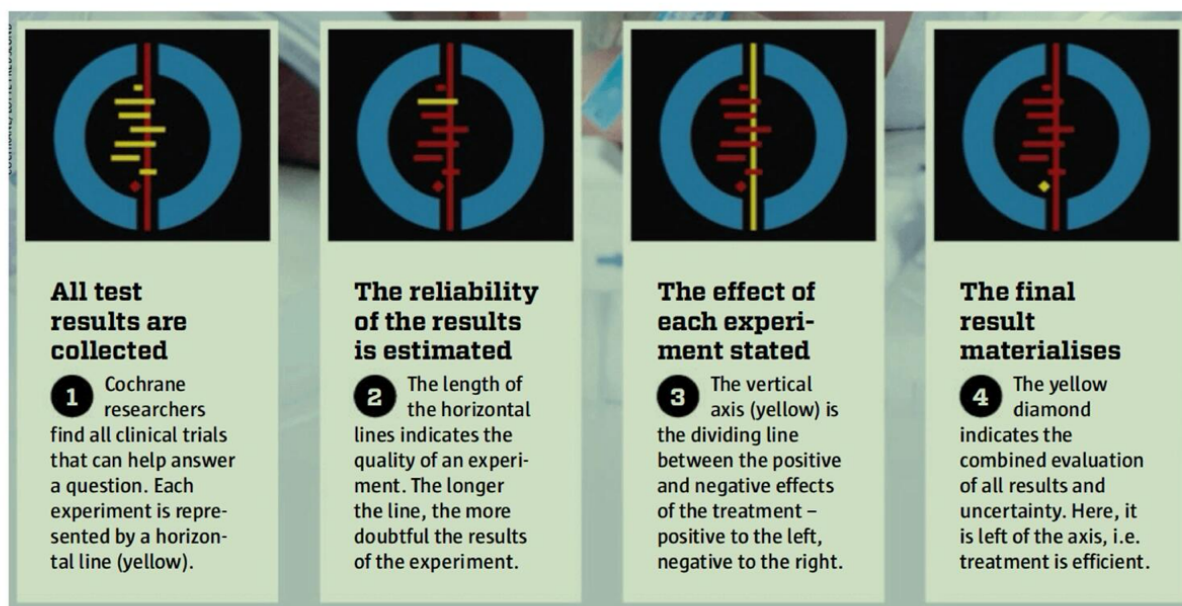

解析：在这段文字中，讲话人将南非的“Ubuntu”哲学与儒家价值观进行比较。Ubuntu 哲学提倡同情心和分享，强调人与人之间的相互关怀和合作，这与儒家“仁民爱物、天下大同”的理念非常契合。儒家思想同样重视对他人的爱和社会的爱与责任，追求和谐与和平的价值观，因此 B 选项最贴切地表达了这种相似性。

A. “有朋自远方来，不亦乐乎？”：此句表达的是对远道而来朋友的欢迎，但没有直接涉及“同情和分享”或“人与人之间的和谐”。

C. “与人同乐，其乐更乐”：虽然传递了分享的快乐，但未能充分表达出 Ubuntu 哲学和儒家思想中的人际和谐之意。

D. “求同存异”：强调包容差异，但在此语境下不如 B 选项贴切，因为它没有直接反映出 Ubuntu 和儒家共同倡导的和谐价值观。

The organisation Cochrane, named after Scottish doctor Archie Cochrane, was founded in 1993. For 30 years, it has been a watchdog for patients, and a professional compass for doctors. Cochrane’s logo—a “forest plot”—is the type of diagram that scientists use to review research results and determine whether drugs truly have the right effect.

7. Which of the following statements is NOT true according to the diagrams?

A. The colour of the diamond indicates the validness of the combined evaluation.

B. The vertical axis dividing the circle into two parts is used to distinguish the treatment effect.

C. The shorter the horizontal line is, the more certain the results of the experiment are.

D. A horizontal line falling to the right of the vertical axis indicates ineffective treatment.

解析：A 选项：“菱形的颜色表示综合评估的有效性。”这是错误的。根据图片中的描述，菱形的位置（而非颜色）表示最终结果的综合评估。如果菱形位于左侧，表明治疗有效；位于右侧则无效。颜色在此并未表示有效性。

B 选项：“将圆形分成两部分的垂直轴用于区分治疗效果。”这符合图中的说明，垂直轴用于区分治疗效果的正负，左侧为正面效果，右侧为负面效果。

C 选项：“水平线越短，实验结果越确定。”这是正确的。图中解释水平线的长度表示实验结果的不确定性，水平线越短，结果越可靠。

D 选项：“在垂直轴右侧的水平线表示治疗无效。”图中显示右侧表示负面效果，因此此选项正确。

In 2019, tropical forest ecologist James Dalling of the University of Illinois Urbana-Champaign came across a thicket of *Cyathea rojasiana* tree ferns in Quebrada Chorro. Moving dead fronds out of the way wasn't easy: The leaves, still attached to the plants, extended into the ground. Digging them up revealed rootlets sprouting from vein tips. In the lab, rootlets planted in pots with a stable form of nitrogen pulled the nutrient into the ferns, confirming that the structures act as roots, Dalling and colleagues report this January in *Ecology*. The fern may use dead leaves to seek out nutrients instead of investing in new roots.

8. What is the text mainly about?

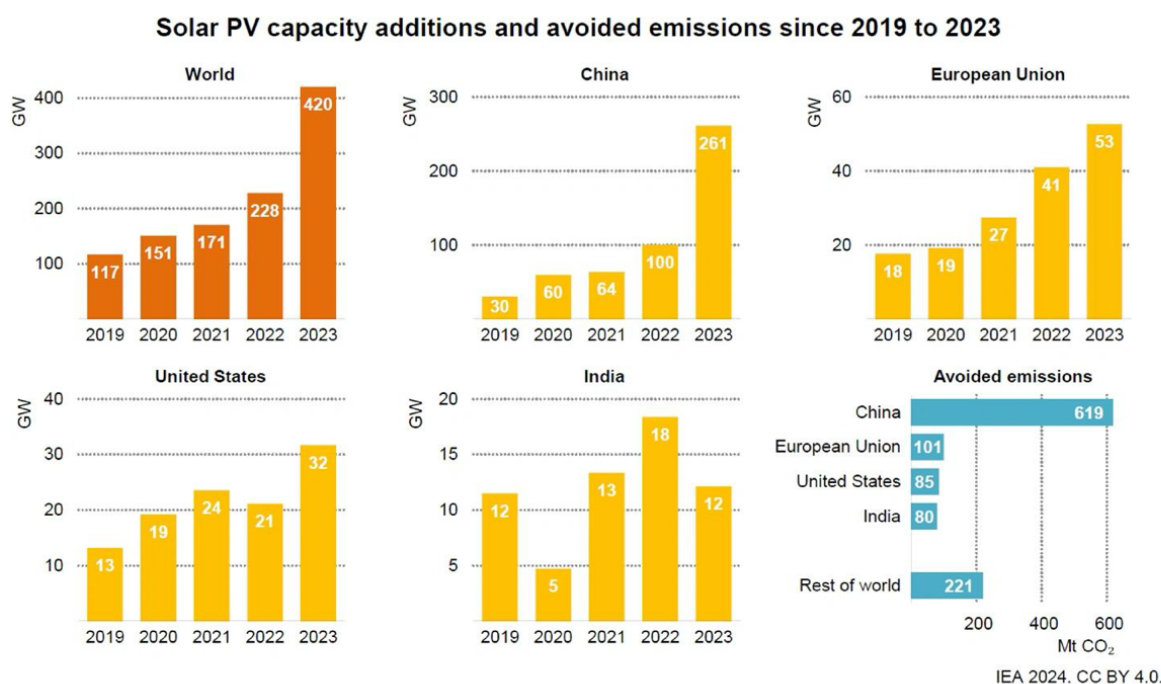

- A. The dual system of rootlets unique to tree ferns.
- B. The fundamental breakthrough made in digging dead leaves.
- C. The hard lesson learnt from the artificial cultivation of tree ferns.
- D. The hidden role of dead leaves in tree fern nutrition.

解析：这段文字主要讲述了树蕨如何利用枯叶来获取营养。James Dalling 发现树蕨的枯叶深入地下，并能从叶脉末端长出根状结构，这些结构可以吸收氮等营养元素。这表明树蕨可能通过这些枯叶来获取营养，而不是通过生长新根。因此，D 选项最贴切地概括了文章的主题，即“树蕨中枯叶在营养摄取中的隐藏作用”。

- A. “树蕨独特的双重根系系统”：文中并未提到双重根系系统，只讨论了枯叶的根状结构。
- B. “挖掘枯叶的重大突破”：文中并未将此发现描述为“重大突破”，只是描述了实验过程和发现。
- C. “树蕨人工栽培中的艰难教训”：文中并未提到人工栽培或遇到的“艰难教训”。

Questions 9-11

Directions: Read the chart about solar PV capacity and avoided emissions and decide whether the following statements are True or False.

Notes: "Avoided emissions" refers to avoided emissions in one year from cumulative deployment since 2019 to 2023.

9. The global solar PV capacity additions increased significantly from 2022 to 2023, reaching over 420 GW, with China alone accounting for the most of the global increase.

- A. True
- B. False

解析：从图中可以看出，2023 年全球太阳能光伏装机容量达到了（reach over 表示到达）420 GW，相较 2022 年显著增加。其中，中国新增容量为 261 GW，是所有国家中最高的，因此

该说法正确。

10. In 2023, India added 12 GW of solar PV, and of the five economies, India was the only one whose solar PV additions failed to maintain sustained growth from 2019 to 2023.

A. True

B. False

11. The total deployment of solar PV from 2019 to 2023 avoids around 1 billion tonnes of CO₂ emissions annually, and China tops the rankings with the largest avoided emissions.

A. True

B. False

解析：图中显示，全球累计部署的太阳能光伏每年可避免约 1 亿吨（1000 百万吨）二氧化碳排放量。中国的二氧化碳避免排放量为 619 百万吨，位居第一。因此该说法正确。

Part II Read and Reason (10 marks) (15 MINS)

There are several texts on different subjects in this part. Read the directions and answer the questions.

Questions 12-13

Directions: Read the text and answer the questions.

China is a country that places great emphasis on innovation and efficiency. Various sectors of the economy in China have benefited from the drive for innovation and efficiency, and the country's infrastructure stands out as a remarkable example.

Starting from humble beginnings, China has made rapid advances in innovation and efficiency, with consistent high-quality output leading to an overall improvement in living standards. Today, the phrase "made in China" has transcended mere branding and become a seal of excellent quality, a guarantee of efficient production, and a symbol of reliability.

A notable example of the benefits of China's innovation for the development of the national infrastructure is the shield tunneling machine. This advanced technology is used for large-scale tunnel projects such as urban subways, mountain tunnels, and sea-crossing tunnels. The machine is able to efficiently excavate a variety of soil and rock and transport the soil and rock outside the tunnel system, while allowing for the assembly of tunnel lining and the measurement of orientation deviation.

For many years, China had to rely on foreign technologies and machines, which came with significant drawbacks such as high import costs, inefficient equipment maintenance, and time-consuming international communication. These challenges created obstacles to the efficiency and

objective in dealing with problems of this kind, have all the reasons to go to the root of the question by a more daring and direct approach as suggested above. It would be interesting, too, to find out whether introspective psychology could still revitalize its function by lending its technique to a new mode of operation in the study of the proposed thesis. In my judgement, and with all the premises as laid above, the psychological situation so created may be as appropriate as one can make for the conduct of such an experiment. Let us hope that before long, there may be some qualified and adventurous spirit who will be willing enough to try.

(From *The Beginnings of Chinese Civilization*)

12. Why are supplementary evidences especially needed in the studies of Chinese Thought?

- A. Because Chinese Thought is constantly changing.
- B. Because direct observations are more reliable.
- C. Because documentary data may be remote from realities.
- D. Because there are not enough original sources.

解析：这个答案可以直接从文章第一段找到证据："These supplementary evidences are especially needed in the studies of 'Chinese Thought,' about which documentary data, in the majority of cases, may be so remote from realities that they can hardly reveal its true or complete nature."

具体分析各选项：

- A 选项（Chinese Thought 不断变化）文章没有提到
- B 选项（直接观察更可靠）虽然文章提到需要直接观察，但这不是主要原因
- C 选项准确反映了文章所述，文献资料可能与现实相去甚远
- D 选项（原始资料不足）文章没有提到这个问题

13. What does the author think of non-Chinese scholars studying Chinese Thought?

- A. He is supportive, believing that they can bring objectivity.
- B. He is neutral but worries that they lack the necessary resources.
- C. He is critical, thinking that they do not understand Chinese culture well enough.
- D. He is skeptical about their ability to understand Chinese Thought.

解析：在文章第二段中，作者明确表示了对非中国学者研究中国思想的支持态度："non-Chinese scholars... are naturally more objective in dealing with problems of this kind, have all the reasons to go to the root of the question by a more daring and direct approach"。

具体分析各选项：

A 选项完全符合作者的观点，作者认为非中国学者能带来客观性，并支持他们采用更直接的研究方法

Questions 14-16

Directions: Read the text and answer the questions.

"Our brains constantly predict what to expect in the world around us and the consequences of our

案。

- A. 政府的机械生产政策——文中未提及政府政策的直接推动作用。
- C. 工业部门的利润追求——文中并未提到利润追求是创新的主要动力。
- D. 国际生产效率竞争——文中没有提到国际竞争是主要推动力。

13. Which of the following is true about the performance of the Chinese shield tunneling machines?

A. Their performance was validated in the construction of the Chengdu Metro system.

- B. They are superior to imported machines in quality and price.
- C. They are free of monitoring when used in favourable geological conditions.
- D. Their performance was unproven until they were in use for 8 months.

解析文中提到，在成都地铁的建设过程中，国产盾构机通过与进口机器并行作业的方式验证了其性能。这说明 A 选项正确。

- B. 它们在质量和价格上优于进口机器——文中仅提到价格竞争力，并未明确指出国产盾构机在质量上优于进口机器。
- C. 在有利的地质条件下使用时不需要监控——文中未提到任何关于在有利条件下免于监控的内容。
- D. 它们的性能在使用 8 个月之前未被证明——文中提到在 10 个月证明了其性能，因此 8 个月的说法不准确。

Questions 14-16

Directions: Read the text and answer the questions.

It begins each day at nightfall. As the light disappears, billions of zooplankton, crustaceans and other marine organisms rise to the ocean surface to feed on microscopic algae, returning to the depths at sunrise. The waste from this frenzy—the Earth's largest migration of creatures—sinks to the ocean floor, removing millions of tonnes of carbon from the atmosphere each year.

This activity is one of thousands of natural processes that regulate the Earth's climate. Together, the planet's oceans, forests, soils and other natural carbon sinks absorb about half of all human emissions.

The oceans—nature's largest absorber of CO₂—have soaked up 90% of the warming from fossil fuels in recent decades, driving a rise in sea temperatures. Studies have also found signs that this is weakening the ocean carbon sink.

The flow of carbon through the land and ocean remains one of the least understood parts of climate science, say researchers. While human emissions are increasingly simple to measure, the sheer number and complexity of processes in the natural world mean there are important gaps in our understanding.

Satellite technology has improved monitoring of forests, peatlands, permafrost and ocean cycles, but assessments and forecasts in international reports often have large error margins. That makes it difficult to predict how the world's natural carbon sinks will behave in future—and means many models do not factor in a sudden breakdown of multiple ecosystems.

“Overall, models agreed that both the land sink and the ocean sink are going to decrease in the future as a result of climate change. But there's a question of how quickly that will happen. The models tend to show this happening rather slowly over the next 100 years or so,” says Prof Andrew Watson, head of Exeter University's marine and atmospheric science group.

“This might happen a lot quicker,” he says. “Climate scientists are worried about climate change not because of the things that are in the models but the knowledge that the models are missing certain things.”

Many of the latest Earth systems models used by scientists include some of the effects of global heating on nature, factoring in impacts such as the dieback of the Amazon or slowing ocean currents. But events that have become major sources of emissions in recent years have not been incorporated, say scientists.

“None of these models have factored in losses like extreme factors which have been observed, such as the wildfires in Canada last year that amounted to six months of US fossil emissions. Two years before, we wrote a paper that found that Siberia also lost the same amount of carbon,” says Philippe Ciais, a researcher at the French Laboratory of Climate and Environmental Sciences.

“Another process which is absent from the climate models is the basic fact that trees die from drought. This is observed and none of the models have drought-induced mortality in their representation of the land sink,” he says. “The fact that the models are lacking these factors probably makes them too optimistic.”

14. What happens to the waste produced by marine organisms?

- A. It rises to the ocean surface and is absorbed by the ocean currents.
- B. It is consumed by other marine organisms.
- C. It sinks to the ocean floor, removing carbon from the atmosphere.
- D. It evaporates into the atmosphere and releases carbon.

解析：原文第一段提到，“The waste from this frenzy...sinks to the ocean floor, removing millions of tonnes of carbon from the atmosphere each year”（这些废物沉入海底，每年从大气中移除数百万吨的碳）。因此，C 选项正确，废物沉入海底，并从大气中移除碳。

- A. “上升到海洋表面并被洋流吸收”——文中没有提到废物被洋流吸收。
- B. “被其他海洋生物消耗”——文中没有提到废物被消耗。
- D. “蒸发进入大气并释放碳”——文中明确表示废物沉入海底，而非蒸发。

15. What is one of the reasons explaining why climate models may be overly optimistic?

- A. The influence of human activities on climate change is devalued.
- B. The technology for monitoring ecological recovery speed is immature.
- C. The emergency of large-scale emissions events is ignored.
- D. The ocean's ability to absorb CO₂ in the atmosphere is overestimated.

解析：文中提到，“events that have become major sources of emissions in recent years have not been incorporated”（近年来成为主要排放源的事件并未被纳入模型）。例如，加拿大的野火和西伯利亚的碳损失。这表明气候模型忽略了这些大规模排放事件，因此 C 选项正确。

16. What does the text mainly talk about?

- A. The flowing process of carbon through the land and ocean.
- B. The effectiveness of natural carbon sinks in halting climate change.
- C. The uncertainties in climate models related to natural carbon sinks.
- D. The role of marine life in reducing carbon emissions of ocean ecosystems.

解析：文章主要讨论了气候模型中关于自然碳汇的不确定性。例如，文中提到“the sheer number and complexity of processes in the natural world mean there are important gaps in our understanding”（自然界的复杂过程导致我们对碳循环的理解存在重要空白），以及“models are missing certain things”（模型缺少一些因素），说明文章关注气候模型中关于自然碳汇的不确定性。因此，C 选项正确。

- A. “碳在陆地和海洋中的流动过程”——虽然提到了碳的流动，但重点在于模型的不确定性。
- B. “自然碳汇在阻止气候变化方面的效果”——文中没有讨论碳汇阻止气候变化的具体效果。
- D. “海洋生物在减少海洋生态系统碳排放方面的作用”——虽然提到了海洋生物的作用，但不是文章的主要讨论内容。

Part III Read and Question (18 marks) (25 MINS)

Questions 17-22

Directions: Read the texts about artisans and answer the questions.

Text A

At the first, we should be clear what we mean by the word “artisan.” In most modern works, an artisan is defined as a general category for craftspeople, encompassing all those who either make or decorate objects as their primary occupation. Their products can be as utilitarian as pots and tools or as ornamental as paintings, sculpture, and jewelry. Regular artisans are often distinguished from so-called true artists, who are thought to make something called “art” based on lofty aesthetic and moral motivations and are assumed (quite erroneously) to be above groveling for monetary remuneration.

The term “artisan” in this study is offered as a translation of the Chinese word gong. In early texts, the word gong encompasses all those who engage in a broad range of activities from jade working to iron casting to mural painting. It seems to indicate any craftsman (or woman) who made objects,

regardless of whether or not the objects were decorated, and thus closely approximates the modern English connotations of the word “artisan.” It should also be made quite clear that early China possessed no word to indicate an “artist” in the modern Western sense of the word. Even the portrait painters to the emperor were lumped together with common potters under the same term, gong.

During the period under study (221 BCE–220 CE), prefixes were commonly added to the word gong to indicate the specific craft undertaken. Some of the compound phrases we will encounter in this book include hua-gong (design painter; figure painter); shi-gong (mason; stone carver); huangtu-gong (amalgam gilder); su-gong (core carver for lacquer vessels); mu-gong (joiner; carpenter; woodworker), etc.

In its broadest application, the label gong was even applied to ditchdiggers, construction workers, and other manual laborers, though it was never applied to farmers, foresters, huntsmen, or fishermen. In its customary sense, however, it indicated nonagricultural laborers, male or female, who made or decorated things with their hands.

It appears on current evidence that the Chinese word for “artisan” (gong) was originally a pictographic logogram indicating a tool, possibly a carpenter’s square. The term was later extended in meaning to signify the workers (and ritual practitioners) who used that tool. By the time of its first appearance in the extant written record (ca. 1200–771 BCE), the term gong already encompassed a broad spectrum of artisans, regardless of specialty.

To round off our discussion of the etymology and scope of the word gong, we should also note that another character derived from the depiction of a tool, jiang, was used in early China to indicate carpenters and architects. In this case, the graph depicts an axe inside a box or built enclosure. The distinction between gong and jiang is not always clear in early texts, and the two terms were sometimes used in combination, as gong-jiang, to form an all-inclusive term for craftspeople. This compound is still widely used in the Chinese language today as a collective term for craftspeople.

When referring to the role of the artisan in the ancient economy, Romanist Jean-Paul Morel declared that “because the crafts were disdained in ancient times, we tend to underestimate their economic importance.” This statement could easily apply to early China as well, where the importance of agriculture was stressed by all writers, almost to the exclusion of every other sector of the economy. The ancient Chinese writers slighted the economic role of artisans, and we tend to follow their biases uncritically.

Text B

What comes to your mind when the word “artisan” is mentioned? You may have come across the term on a vacation to Bali or Chiang Mai when you visited a craft centre, or perhaps you chanced upon it at a shop at the airport that sells local craft forms. Travel and tourism are some of the most

common associations with artisans today. However, one may wonder if there is an official definition of an artisan and how an artisan or craftsman differs from an artist. The answer to this question is the basis for one of the biggest debates of the modern era: the question of how to distinguish “art” from “craft.” While a few people do not see a difference, and consider both to be forms of creativity, it is generally understood that while art is expression of human emotion, craft leads to something tangible, which could be of use.

In fact, till the 1400s, there was no distinction between art and crafts. Artisans worked in an apprenticeship-based structure, created products for the royal families, and were well respected and recognised in their society. Italy in the 1500s saw the rise of creative geniuses such as Leonardo da Vinci, and this was when crafts such as painting and sculpturing were classified as done by “artists” while ceramics and metalwork were thought to be crafted by “artisans.”

In Asia, however, this distinction is less obvious. While the Western world believed in continuous innovation with crafts, craftmaking in Asia was viewed more as a way to preserve traditional culture and heritage. This is why, when certain parts of Asia were colonised, the foreign colonial authorities considered local artisans to be inferior to those back home because of this lack of innovation. The colonisation era coincided with the West’s industrialisation period, and during this time Asia became flooded with goods from the West. This affected the local homegrown artisanal work, which could not compete with the high tariff barriers that existed for locally produced artisanal goods. As a result, there was a rise in various movements, such as the Khadi revolution in India, involving protests against the cheap influx of British products and expensive tariffs on native artisanal products.

Though in the past artisanal work used to be celebrated by the royal courts and patronised by the ruler, today they struggle to practise their age-old traditions. In modern society, people value speed and convenience, and there is an incessant push towards greater productivity to satiate the consumers’ growing appetite for more products in a shorter time. In the face of mass production, artisanal work has suffered a sharp decline in demand and value.

Many believe that from an economic standpoint, artisanal work is not economically scalable, less productive, and unable to keep pace with the modern world. Although true to some extent, the argument does not consider the inherent value attached to intangible culture that is preserved by artisans when they practise their crafts. UNESCO, on the other hand, considers traditional craftsmanship as the most tangible manifestations of intangible cultural heritage.

It is estimated that around 10 per cent of artisans leave their craft and migrate to where they can find jobs, often not related to their core competencies. While better livelihoods are desirable, stable livelihoods are what will prevent a loss of skills and the eventual death of the artisanal form. The artisanal economy also faces similar challenges to those of the ethical fashion industry. Low

consumer awareness of the negative impact that cheap fashion and homeware products have on the environment acts as a significant barrier to entry in cost-conscious markets, especially in Asia.

17. According to Text A, what was the main distinction between artisans and artists in early China?

A. Artists were motivated by moral and aesthetic values, while artisans worked primarily for financial gain.

B. Artists specialized in fine arts, while artisans focused solely on practical crafts.

C. There was no clear distinction between artists and artisans, both referred to as *gong*.

D. Artists were government officials, while artisans worked for private individuals.

解析：在文本 A 中提到，“It should also be made quite clear that early China possessed no word to indicate an 'artist' in the modern Western sense of the word. Even the portrait painters to the emperor were lumped together with common potters under the same term, *gong*.”（需要明确的是，早期中国没有用来表示现代西方意义上“艺术家”的词语。即使是皇帝的肖像画家也与普通的陶工同样被称为 *gong*。）这表明，工匠和艺术家没有明确区分，二者都称为 *gong*。

A. “艺术家以道德和美学价值为动机，而工匠主要为经济收益工作”——文本 A 提到这是现代观念，而不是早期中国的定义。

B. “艺术家专注于美术，而工匠专注于实用工艺”——文本 A 并未提到这种明确的分工。

D. “艺术家是政府官员，而工匠为私人工作”——文本 A 未提到这种职业区分。

18. What point does the author make in Text A about the economic role of artisans in ancient China?

A. It was given equal importance as that of agricultural workers.

B. It was underestimated due to the focus on agriculture.

C. It was highly regarded by ancient Chinese writers.

D. It was well-documented and respected.

解析：文本 A 提到，“The ancient Chinese writers slighted the economic role of artisans, and we tend to follow their biases uncritically.”（古代中国的作家轻视工匠的经济角色，我们往往不加批判地追随他们的偏见。）这表明，由于古代中国注重农业，工匠的经济作用被低估了。

A. “与农业工人具有同等重要性”——文本 A 提到的是农业的重视，而非与工匠同等。

C. “古代中国作家高度评价了工匠的经济角色”——实际上，古代作家轻视工匠的经济角色。

D. “工匠的经济角色记录详尽且受到尊重”——文本 A 并未提到这一点。

19. How does Text B describe the impact of colonization on local artisanal work in Asia?

A. Local artisanal industries were established to compete with the Western products.

B. Local artisans were accordingly regarded as inferior due to their lack of innovation.

C. The mass production of artisanal crafts was encouraged to meet global demands.

D. The exchange of traditional crafts was promoted between Asia and Europe.

解析：文本 B 提到，“the foreign colonial authorities considered local artisans to be inferior to those back home because of this lack of innovation.”（殖民当局认为本地工匠因缺乏创新而不如他们本国的工匠。）这表明，由于缺乏创新，本地工匠被视为低劣。

A. “建立本地手工艺行业以与西方产品竞争”——文中并未提到本地工匠行业的建立。

- C. “鼓励手工艺品的大规模生产以满足全球需求”——文中未提到大规模生产。
D. “促进亚洲与欧洲之间的传统工艺交流”——文中未提到工艺的国际交流。

20. What challenge does Text B highlight regarding the survival of artisanal work in the modern world?

- A. Artisans find it difficult to adapt to today's marketing strategies.
B. Artisanal work still practises the age-old traditions.
C. Artisanal work struggles to compete with mass production.
D. Artisans are insensitive to consumers' changing tastes.

解析：文本 B 提到，“In the face of mass production, artisanal work has suffered a sharp decline in demand and value.”（在大规模生产面前，手工艺工作需求和价值急剧下降。）这表明，手工艺工作难以与大规模生产竞争。

- A. “工匠难以适应当今的营销策略”——文本 B 中未提到营销策略的适应问题。
B. “手工艺工作仍然保留了古老的传统”——虽然有提到传统，但并不是主要挑战。
D. “工匠对消费者不断变化的品味不敏感”——文本 B 中未提到工匠与消费者品味的关系。

21. How do Text A and Text B differ in their portrayal of the role of artisans in society?

- A. Text A emphasizes the economic insignificance of artisans, while Text B highlights their vital role in preserving cultural heritage.
B. Text A discusses the historical economic contributions of artisans, while Text B focuses on the cultural and economic challenges faced by artisans today.
C. Text A portrays artisans as valued creators, while Text B suggests that artisans were always undervalued.
D. Text A focuses on the artistic achievements of artisans, while Text B addresses their technical skills.

解析：文本 A 关注的是工匠在古代中国的经济角色（“The ancient Chinese writers slighted the economic role of artisans...”），而文本 B 则探讨了现代工匠面临的文化和经济挑战（“In the face of mass production, artisanal work has suffered...”）。因此，B 选项正确。

22. Comparing Text A and Text B, which of the following challenges do you think the artisans in both ancient China and modern Asia face?

- A. Economic marginalization.
B. Competition from imported goods.
C. A lack of supportive government policies.
D. Informal education and training systems.

解析：文本 A 中提到工匠的经济角色被低估（“The ancient Chinese writers slighted the economic role of artisans...”），而文本 B 则提到在现代，手工艺工作难以与大规模生产竞争，需求下降（“In the face of mass production, artisanal work has suffered a sharp decline in demand and value.”）。因此，经济边缘化是两者共同面临的挑战。

- B. “进口商品的竞争”——文本 B 提到进口商品的影响，但文本 A 未涉及。

- C. “缺乏支持性的政府政策”——两个文本都未直接提到政府政策的支持问题。
D. “非正规教育和培训系统”——两个文本都未提到教育和培训系统的问题。

Part IV Translate and Connect (15 marks) (25 MINS)

Translate the following passage into English.

我国把碳达峰、碳中和纳入生态文明建设整体布局，大力推动能源革命，推进产业绿色低碳转型发展，倡导绿色生活方式。如今，绿水青山就是金山银山的理念逐步成为全党全社会的共识和行动，美丽中国建设迈出重大步伐。

参考翻译：

China has integrated its goals of reaching a carbon peak and achieving carbon neutrality into the overarching framework of ecological civilization construction. It is vigorously advancing an energy revolution, promoting the green and low-carbon transformation of industries, and advocating for a green lifestyle. Today, the notion that *green water and green mountains are golden mountains and silver mountains* is increasingly becoming a shared conviction and action across the entire Party and society. Consequently, significant strides have been made in the construction of a beautiful China.

Part V Write and Create (40 marks) (40 MINS)

An e-magazine named *Life@Future* is seeking writers to comment on the following topic which is to be published in the next edition. You are going to participate in the event.

Will an algorithmic society be our future?

In *The Algorithmic Society: Technology, Power, and Knowledge*, an algorithmic society is characterized by the dominance of algorithms (算法) in decision-making processes within public sectors. By analyzing large volumes of data, algorithms can identify patterns and predict trends, such as improving traffic signals to manage congestion or controlling lighting, heating, and cooling systems in buildings based on occupancy and weather conditions.

Some people embrace the algorithmic society, arguing that algorithms can be fairer and more efficient than human decision-makers in resource allocation, public service delivery, crime prediction, and more. Others, however, warn that if algorithms evolve into the dominant power in social governance, this data-driven tool will manipulate human behavior, affect our ability to make independent decisions, and confuse accountability when administrative errors occur.

What is your perspective on this issue? Write an article of between 250 and 300 words. You should state your opinion with reasons and examples.

这是我的写作思路：

一、引言：引入算法社会的概念

1. **开场说明：**介绍算法社会的概念，简要描述算法在当今生活中的应用，如个性化推荐、智能交通系统等。
2. **中心问题：**提出算法社会可能带来的潜在影响，既包括积极的影响，也包括负面的隐忧。
3. **表明立场：**虽然算法社会有助于提高效率，但我们不能忽视其中潜藏的伦理和社会问题，需要慎重对待。

二、正文

1. 优势方面——算法带来的便利与效率

- **效率提升：**列举算法在交通和建筑管理中的应用，如交通信号的优化、能耗的自动控制等。
- **公共服务：**提到算法在医疗和公共安全领域的应用，如疾病早期检测和犯罪热点预测等。
- **实例支持：**说明算法如何帮助提高资源利用效率，减少浪费，并带来社会整体效率的提升。

2. 潜在的负面影响——算法主导的风险

- **信息茧房与回音室效应：**算法个性化推荐导致用户陷入“信息茧房”，限制多样化观点的接触，可能加剧社会分裂。
- **公平性和偏见：**算法存在偏见问题，可能导致边缘群体受到不公平对待，甚至影响社会资源分配的公正性。
- **责任归属问题：**当算法决策出错时，责任难以厘清，比如在公共服务中出现错误时究竟该归责于程序员、政府还是算法。

三、结论

1. **总结观点：**算法社会提供便利，但必须谨慎平衡算法的使用，避免其成为主导力量。
2. **呼吁监管与人性化处理：**提出监管的重要性，强调要把算法的主导权交还给人类，让算法真正为社会服务，避免被“算法霸权”主导。
3. **展望未来：**我们应努力在享受算法便利的同时，保护个人选择权和社会公平，使技术更好地服务人类。

参考习作：

Will an Algorithmic Society Be Our Future? 算法社会会是我们的未来吗？

As technology progresses, we're edging closer to an algorithmic society where algorithms influence many aspects of our lives, from city planning to personalized content feeds. Advocates argue that algorithms, by analyzing vast amounts of data, can make processes more efficient and equitable than human-driven systems. However, while an algorithmic society offers undeniable benefits, it also presents significant challenges that should not be overlooked.

随着科技进步，我们正逐步迈向一个算法社会——算法在生活的各个方面发挥影响，从城市规划到个性化内容推荐。支持者认为，算法通过分析海量数据，可以使许多流程变得比人类主导的系统更加高效和公平。然而，尽管算法社会带来了不可否认的好处，但其中存在的重大挑战也不容忽视。

On one hand, algorithms can enhance efficiency and improve the quality of life. For instance, algorithms can optimize traffic flow by adjusting signal timings based on real-time congestion data, reducing travel time and lowering emissions. Similarly, in building management, automated systems can control lighting, heating, and cooling based on factors like occupancy and weather, promoting energy efficiency. Beyond these conveniences, algorithms in healthcare can assist in early disease detection, and in public safety, they can help predict crime hotspots, potentially reducing incidents.

一方面，算法能够提高效率，改善生活质量。例如，算法可以通过实时交通数据调整信号灯，从而优化交通流量，减少行车时间并降低碳排放。类似地，在建筑管理中，自动化系统可以根据人流密度和天气条件控制照明、取暖和冷却，促进能源效率。除此之外，在医疗领域，算法有助于疾病的早期检测；在公共安全方面，它们可以预测犯罪热点，或许能减少犯罪事件的发生。

However, an overreliance on algorithms raises ethical and social concerns. Algorithms may trap individuals in “filter bubbles” by curating content based on prior behavior, limiting exposure to diverse viewpoints. This can create “echo chambers” where users see only content that aligns with their beliefs, potentially skewing public discourse and stoking societal division. The risk extends beyond information: as algorithms increasingly determine public services, any bias embedded within them could lead to unfair outcomes, particularly for marginalized communities. Furthermore, accountability can become muddled. If an algorithm makes a flawed decision, such as denying critical social services, identifying who is responsible—the developers, the government, or the algorithm itself—becomes complex.

然而，过度依赖算法会带来伦理和社会问题。算法可能通过根据用户以往行为来筛选内容，将个人困在“信息茧房”中，限制了对多样化观点的接触。这可能形成“回音室效应”，即用户只看到符合自己观点的内容，进而可能扭曲公共讨论，加剧社会分裂。风险不仅限于信息领域：随着算法越来越多地主导公共服务，其内在的偏见可能导致不公平的结果，尤其是对边缘群体而言。此外，责任归属也会变得模糊。当算法做出错误决定，比如拒绝提供关键社会服务时，追究责任变得困难——究竟应该归责于开发者、政府还是算法本身？

In conclusion, while algorithms offer numerous advantages, we should be cautious about allowing them to dominate decision-making processes. A balanced approach, where algorithms are closely monitored and their impacts evaluated, is crucial. This would allow us to enjoy the benefits of an algorithmic society while safeguarding personal agency and accountability, ensuring technology serves humanity, not the other way around.

总而言之，尽管算法具有许多优点，我们应谨慎对待让其主导决策的趋势。关键在于保持平衡，对算法进行严格监控并评估其影响。这种方式既可以享受算法社会的好处，又能保障个人自主权和责任归属，确保技术服务于人类，而非人类被技术所控制。
