

外研社杯·国才杯·2017 年阅读大赛复赛第三场

Questions 1-3 (Suggested completion time: 3 minutes)

Directions: Read the following quotes. Match the quotes with the people. Please note there are two extra options you do not need.

A. William Shakespeare	1. The surest way to corrupt a youth is to instruct him to hold in higher esteem those who think alike than those who think differently.
B. Virginia Woolf	2. All the world’ s a stage,
C. Friedrich Nietzsche	And all the men and women merely players;
D. James Joyce	They have their exits and their entrances;
E. David Hume	And one man in his time plays many parts,
	His acts being seven ages.
	3. I’ ve put in so many enigmas and puzzles that it will keep the professors busy for centuries arguing over what I meant, and that’ s the only way of insuring one’ s immortality.

Question 4 (Suggested completion time: 2 minutes)

Directions: Read the text and answer the question according to the text.

“Samsa’ s change has been interpreted in many symbolic ways. One simple interpretation is that it is autobiographical, since Samsa was an insomniac, and felt that he was a burden to his family. Others claim that his change represented more universal concepts, such as feelings of alienation and dehumanization, since he could no longer be close to anyone because he was a grotesque insect.”

4. Which of the following works does the book review address?

- A) *Crime and Punishment*
- B) *The Metamorphosis*
- C) *One Hundred Years of Solitude*
- D) *Animal Farm*

Question 5 (Suggested completion time: 2 minutes)

Directions: Read the text and answer the question according to the text.

If America’ s universities are indeed poor value for money, why might that be? The main reason is that the market for higher education, like that for health care, does not work well. The government rewards universities for research, so that is what professors concentrate on. Students are looking for a degree from an institution that will impress employers; employers are

interested primarily in the selectivity of the institution a candidate has attended. Since the value of a degree from a selective institution depends on its scarcity, good universities have little incentive to produce more graduates. And, in the absence of a clear measure of educational output, price becomes a proxy for quality. By charging more, good universities gain both revenue and prestige.

5. The major driving force behind the American higher education is _____.

A) elitism B) idealism C) commercialism D) pragmatism

Question 6 (Suggested completion time: 2 minutes)

Directions: *Read the sentences and answer the question according to the text.*

1. People with chronic insomnia may benefit from some form of treatment to help them get back to healthy sleep patterns.
2. Changes in the environment, unhealthy sleep habits, shift work, other clinical disorders, and certain medications could lead to a long-term pattern of insufficient sleep.
3. Chronic insomnia is disrupted sleep that occurs at least three nights per week and lasts at least three months. Chronic insomnia disorders can have many causes.
4. Chronic insomnia can be comorbid, meaning it is linked to another medical or psychiatric issue, although sometimes it's difficult to understand this cause and effect relationship.

6. What is the proper sequence of the sentences to form a logical paragraph?

A) 4-3-2-1 B) 2-1-3-4 C) 3-2-1-4 D) 1-4-2-3

Question 7 (Suggested completion time: 2 minutes)

Directions: *Read the text and answer the question according to the text.*

In the rich world, even though nearly half of young adults are graduates and numbers are continuing to rise, the graduate premium (the wage difference between those with and those without degrees) has XXXX for it to be worth going to university. Part of the explanation may be credentialism in some rich countries. The more people have degrees, the more employers will insist on recruiting graduates. In many countries jobs such as teaching and nursing, which did not require a degree 30 years ago, are now reserved for graduates. When just a small elite went to university, plenty of decent jobs were available to those with only secondary schooling. That is no longer true.

7. Which of the following is the most probable choice for XXXX?

- A) remained basically stable B) remained high enough
C) remained unpredictable D) remained rather low

Question 8 (Suggested completion time: 2 minutes)

Directions: *Read the text and answer the question according to the text.*

Smartphones matter partly because of their ubiquity. They have become the fastest-selling gadgets in history, outstripping the growth of the simple mobile phones that preceded them. They outsell personal computers four to one. Today about half the adult population owns a smartphone; by 2020, 80% will. Smartphones have also penetrated every aspect of daily life. The average American is buried in one for over two hours every day. Asked which media they would miss most, British teenagers pick mobile devices over TV sets, PCs and games consoles. Nearly 80% of smartphone-owners check messages, news or other services within 15 minutes of getting up.

The bedroom is just the beginning. Smartphones are more than a convenient route online, rather as cars are more than engines on wheels and clocks are not merely a means to count the hours. Much as the car and the clock did in their time, so today the smartphone is poised to enrich lives, reshape entire industries and transform societies.

8. To conclude, smartphones are _____, addictive and transformative.

- A) pervasive B) beneficial C) penetrating D) detrimental

Question 9 (Suggested completion time: 2 minutes)

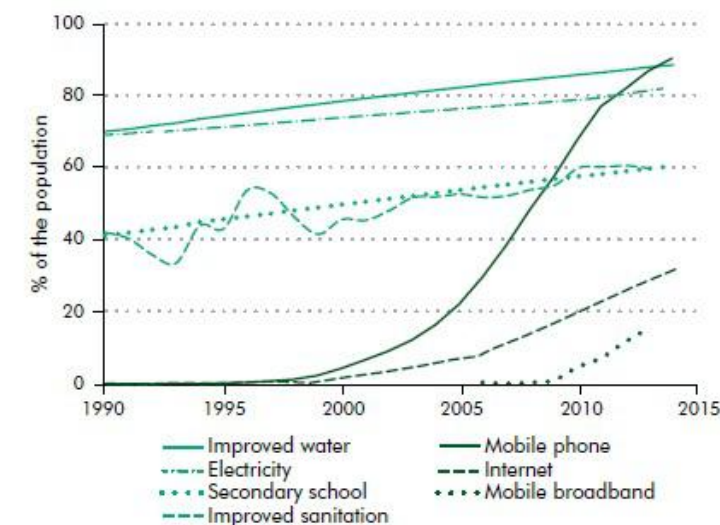

Directions: *Read the text and answer the question according to the text.*

Happy birthday, Tommy Hilfiger! The world-renowned designer turns 66 on March 24, 2017. Since coming onto the scene in the mid-1980s, the Tommy Hilfiger brand has been worn by virtually every major celebrity at their peak—from Aaliyah to Beyoncé to Gigi Hadid. It all began when Snoop Dogg performed on “Saturday Night Live” in a Hilfiger striped shirt. What followed, even the designer himself couldn’t have predicted. NSync posed in matching Tommy Hilfiger windbreakers, first daughter Ivanka Trump starred in a Tommy Jeans ad campaign, and even Michael Jackson showed his pride for team Hilfiger. Let’s take a walk down memory lane to see which other celebs loved their Tommy.

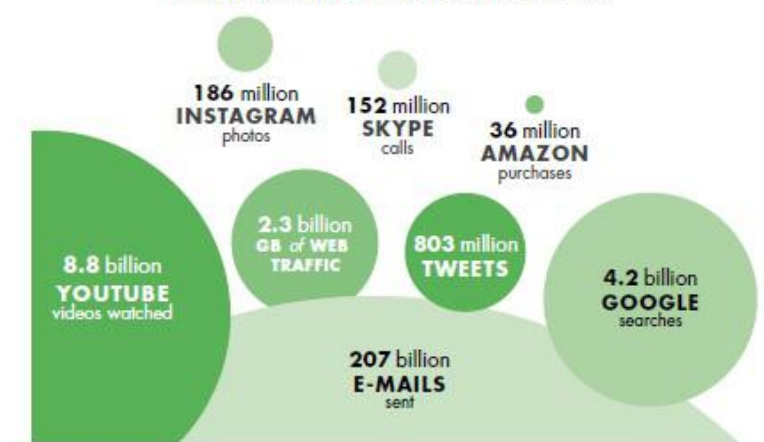

9. Where is the text probably taken from?

- A) A propaganda poster. B) A promotional coupon.
C) A fashion magazine. D) A birthday card.

a. Digital technologies are spreading rapidly in developing countries

b. A typical day in the life of the internet

**Question 10 (Suggested completion time: 5 minutes)**

Directions: The following charts show the digital transformation in action. Answer the question according to the charts.

10. Which of the following is an INCORRECT description about the charts?

- A) According to Chart b, increasing internet access has led to an explosion in the production and consumption of information around the world.
- B) According to Chart a, more households in developing countries own a mobile phone than have access to electricity or improved sanitation.
- C) Mobile phones, reaching more than four-fifths of the population currently, provide the main access to digital technologies in developing countries.
- D) The internet and related technologies have developed at approximately the same pace as previous technological innovations in developing countries.

Questions 11-12 (Suggested completion time: 8 minutes)

Directions: Read the definitions of two types of logical fallacy. Answer the questions according to the definitions.

Sources: World Development Indicators (World Bank, various years); WDR 2016 team

Note: In Chart a, for some years data for electricity are interpolated from available data.

Tu Quoque

Known by its Latin name, *tu quoque* means "you too," and this fallacy involves countering someone's argument by pointing out that it conflicts with his or her own past actions or statements. Thus, by answering a charge with a charge, it diverts attention from the argument at hand to the person making it.

No True Scotsman

The argument comes up after someone has made a general claim about a group of things, and then been presented with evidence challenging that claim. Rather than revising their position, or contesting the evidence, they dodge the challenge by arbitrarily redefining the criteria for membership in that group.

11. Which of the following provides a typical example of the *tu quoque* fallacy?

A) **Mother:** You should stop smoking. It's harmful to your health.

C) **Wilma:** You cheated on your income tax. Don't you realize that's wrong?

Daughter: Why should I listen to you? You started smoking when you were 16!

Walter: Hey, wait a minute. It's none of your business.

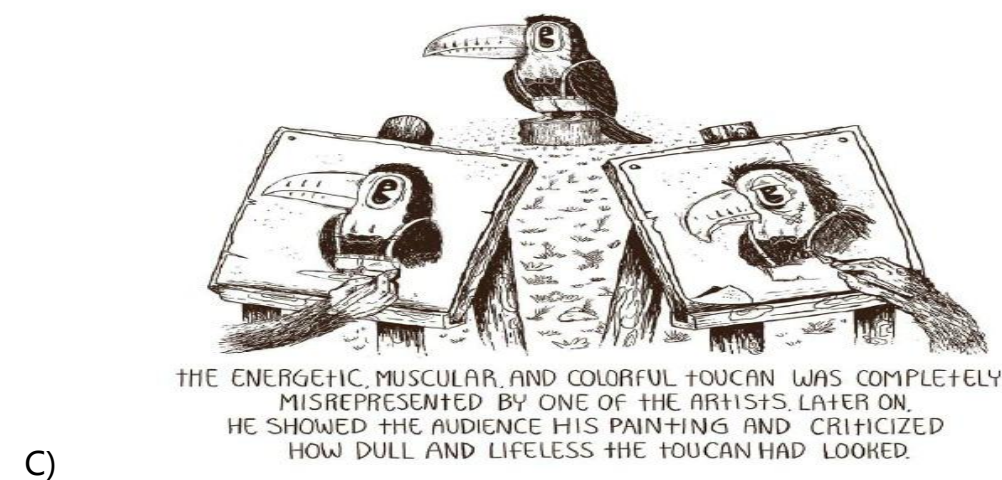

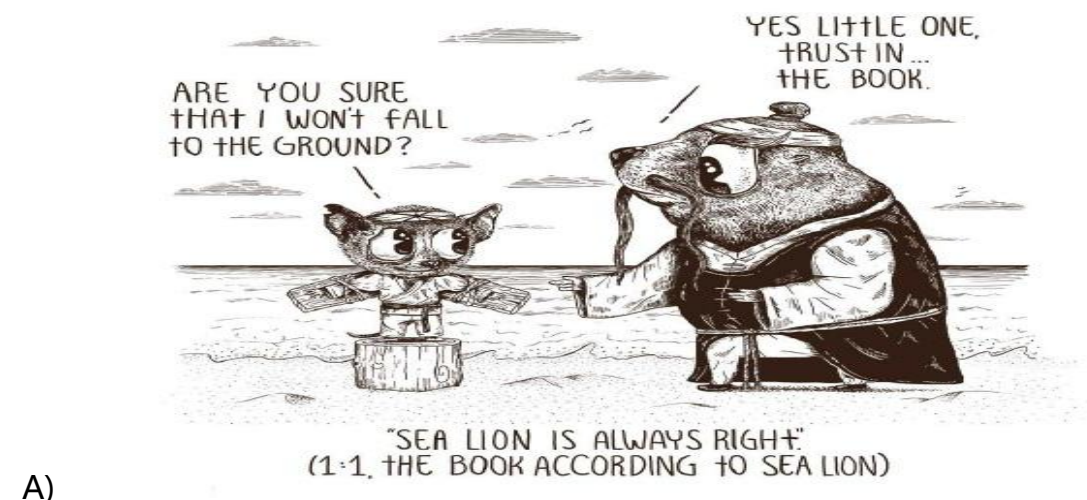

B) **Police officer:** Alice, we found 1.21G of illegal goat porn on your laptop, what do you have to say for yourself?

D) **Alice:** Canada's health care policies are more effective than those of the United States.

Alice: But officer, I haven't seen them.

Bob: But you never obey those policies, don't you?

12. Which of the following pictures provides a typical example of the *no true scotsman* fallacy?

B)

D)

Question 13 (Suggested completion time: 4 minutes)

Directions: Read the text and answer the question according to the text.

In a research designed to investigate the possibility of animals developing friendship with other, unrelated, members of their species, a group of 29 chimpanzees were reared together for 15 years. At the end of that time the chimps were presented with two options for obtaining food: press a lever and feed themselves, or press another identical lever and feed themselves, and at the same time deliver food to the chimp next door. (The chimps were able to see each other). **The researchers found that the chimps were no more likely to choose the lever that fed a neighbor.** The researchers concluded that the chimps had no concept of friendship. However, one critic has suggested that the animals were in an artificial environment from which little can be concluded, and that, at the least, **the test ought to have involved the animals being able to touch.**

13. What role do the parts in bold play in the argument above?

A) The first is part of the evidence that the critic disputes. The second is a suggestion that the researchers do not accept.

C) The first is a position that the critic opposes. The second is a position that the critic supports.

B) The first is an observation that supports the critic's conclusion. The second is the critic's conclusion.

D) The first is an observation that supports the researchers' position. The second is an observation that opposes the researchers' position.

E) The first is a finding on which the researchers base their conclusion. The second is a suggestion that might cast doubt on that finding.

Question 14 (Suggested completion time: 4 minutes)

Directions: Read the text and answer the question according to the text.

Detective James Gordon needs to access a secret door that can be accessed only by a code. The code is about 7 characters and consists of numbers and alphabets. There is a picture just above the door as shown below with the text “You force heaven to be empty” . Can you help detective James Gordon to break the code?

14. The answer: U47 _____ T. (One letter or number in one blank. Put them together in the following blank, for example: AB)

Questions 15-16 (Suggested completion time: 6 minutes)

Directions: Read the text about genetic drift. Answer the questions according to the text.

Genetic drift is defined as the changing of the number of available alleles (等位基因) in a population by chance events. Also called allelic drift, this phenomenon is usually due to a very small gene pool or population size. Unlike natural selection, it is a random, chance event that causes genetic drift and it depends solely on statistical chance instead of desirable traits being passed down to offspring.

Unless the population size increases through more immigration, the number of available alleles gets smaller with every generation.

Genetic drift happens by chance and can make an allele disappear completely from a gene pool, _____15_____. The random sampling style of genetic drift shrinks the gene pool and therefore alters the frequency the alleles are found in the population. Some alleles are completely lost within a generation due to genetic drift.

This random change in the gene pool can affect the speed of evolution of a species. Instead of taking several generations to see a change in allele frequency, genetic drift can cause the same effect within a single generation or two. The smaller the population size, the greater the chance of genetic drift occurring. Larger populations tend to function through natural selection much more than genetic drift due to the sheer number of alleles that are available for natural selection to work on as compared to smaller populations.

The Hardy-Weinberg equation cannot be used on small populations where genetic drift is the main contributor to diversity of alleles.

15. Which of the following best fits in the numbered space in the text?

- A) and it occurs when a larger population shrinks largely in size in a short amount of time C) even if it is a desirable trait that should be passed down to offspring
B) which is a small population formed from a larger population D) where individuals of the population have higher risks of inheritable diseases

16. Which group will be most strongly affected by genetic drift according to the text?

- A) A population of 3000 males and 6000 females. C) A population of 1000 males and 1000 females.
B) A population of 5000 males and 5000 females. D) A population of 2000 males and 500 females.

Questions 17-19 (Suggested completion time: 5 minutes)

Directions: Read the text about umbrellas. Answer the questions according to the text.

A corner-store umbrella might save cash in the short term, but you' ll pay later when it fails catastrophically during a downpour. So invest in a canopy tough enough to deserve a lifetime warranty. High-tensile-strength materials, frames engineered to withstand gales, and fabric that won' t get sopping wet add up to rain blockers that you can replace for free—instead of angrily stuff in a trash can.

1. Totes Titan Mini

Just over half a pound and under 7 inches long when closed, the Titan Mini hides neatly in the bottom of your everyday carry or in a jacket pocket. The 41-inch canopy keeps you—and itself—dry thanks to a **hydrophobic** coating that repels rain. That means less drippage once you step back inside or shove it into your bag.

2. Davek Solo

Carbon ligaments in the Solo' s frame keep it flexible, so ____18____. Its 43-inch canopy has a tight weave (190 thread count, to be precise) to stop leaks and snags, and it folds down to a tidy 11.75-inch package. A button on the handle triggers opening and closing, and it works as a repair switch when things go inside out.

3. Gustbuster Pro Series Golf

It' s not impossible to flip or break the Gustbuster umbrella, but your grip will almost certainly fail before its frame does. Teardrop-shaped vents in the underlayer allow wind to whoosh out the top, withstanding gusts up to 55 miles per hour. In such harsh conditions, you' ll be glad the massive 5-foot canopy has enough room for a friend to help you cling on to the handle.

17. The word **hydrophobic** is closest in meaning to _____.

- A) removable B) shockproof C) technological D) showerproof

18. Which of the following best fits in the numbered space in the text?

- A) while it might invert when gusts hit, it won't snap
- B) it's perfect for keeping a single person's head and torso dry
- C) supported by wooden or metal ribs it's a folding canopy
- D) with the size of only a water bottle it fits into a backpack's pocket

19. Which of the following can be inferred from the text?

- A) If we want an umbrella that weighs less than a pound, Davek Solo is a good choice.
- B) All three kinds of umbrellas are economically wise choices for both short and long terms.
- C) If we want an umbrella made of nicer fabric, Totes Titan Mini is a good choice.
- D) If we need the maximum coverage, Gustbuster Pro Series Golf is our choice.

Questions 20-21 (Suggested completion time: 5 minutes)

Directions: *Read the text about ancient deal-makers. Decide whether the statements are True or False according to the text.*

Long before anyone licked the gum on an envelope, people used seals to ensure that their letters weren't opened until they reached their recipients. If the seal was broken before it reached its destination, it indicated that someone had opened it.

Now an archaeological dig in Israel's City of David National Park, in the area of the walls of Jerusalem, has unearthed a collection of small clay seals that prove that the practice of using seals to ensure the privacy of a message goes back more than 2,700 years.

Some of the seals display pictures—each one apparently representing a clerk who wrote the letter or indicating the general contents of the message. Others bear the names of the clerks themselves, in Hebrew script.

Though the fire that consumed Jerusalem at its destruction destroyed the letters, it actually preserved the pottery-like seals.

The seals "bear witness to the developed administration of the city in the First Temple period," according to Ortal Chalaf and Dr. Joe Uziel, directors of the excavation for the Israel Antiquities Authority.

"In later stages of the period—from the time of King Hezekiah (around 700 BC) and up to the destruction of Jerusalem in 586 BC—the seals bear the names of clerks in early Hebrew script. Through these findings, we learn not only about the developed administrative systems in the city, but also about the residents and those who served in the civil service."

One seal, bearing the name "Achiav ben Menachem," has drawn particular interest, because the names "Menachem" and "Achiav" are known in the context of the Kingdom of Israel.

Menachem was an Israeli king, and though the name “Achiav” does not appear in the Bible, it resembles “Achav” —Ahab—the king of Israel in the tales of the prophet Elijah. The name also appears in the Book of Jeremiah.

“These names are part of the evidence that after the exile of the Tribes of Israel, refugees arrived in Jerusalem from the northern kingdom and found their way into senior positions in Jerusalem’s administration,” Chalaf and Uziel said.

20. The seals bearing names or pictures appeared around 2,700 years ago in Jerusalem.

A) True B) False

21. The seals found in the archaeological site can be a trace of the migration of residents in Israel.

A) True B) False

Questions 22-23 (Suggested completion time: 8 minutes)

Directions: *Read the text about Chaco Culture. Answer the questions according to the text.*

The “Chaco Culture,” as modern-day archaeologists call it, flourished between roughly the 9th and 13th centuries A.D. and was centered at Chaco Canyon in what is now New Mexico.

The people of the Chaco Culture built immense structures that at times encompassed more than 500 rooms. They also participated in long-distance trade that brought cacao, macaws (a type of parrot), turquoise and copper to Chaco Canyon.

22, researchers have to rely on the artifacts and structures they left behind, as well as oral accounts that have been passed on through generations, to reconstruct what their lives were like.

Archaeologists generally agree that Chaco Canyon was the center of Chaco Culture. Today the canyon is a national park and a UNESCO World Heritage Site. The National Park Service estimates that there are about 4,000 archaeological sites in the park, including more than a dozen immense structures that archaeologists sometimes call “Great Houses.” Archaeological research has revealed many discoveries, including a system of roads that connected many Chaco Culture sites, and evidence of astronomical alignments that indicate that some Chaco

Culture structures were oriented toward the solstice sun and lunar standstills.

“There has been more archaeological research conducted in Chaco and on the subject of Chaco than on any other prehistoric district in North America,” says a National Park Service statement posted on Chaco Culture National Historical Park’s website.

“Today, twenty Puebloan groups in New Mexico, as well as the Hopi in Arizona, claim Chaco as their ancestral homeland and are tied to this place through oral traditions and clan lineages. A number of Navajo clans are also affiliated with Chacoan sites through their traditional stories,” the National Park Service statement says.

Despite the fact that there has been an immense amount of archaeological research carried out at Chaco Canyon, and at other Chaco Culture sites in the American Southwest, modern-day archaeologists disagree over what the people of the Chaco Culture were like.

Some archaeologists think that the people of the Chaco Culture were not politically united, while some think they controlled an empire centered on Chaco Canyon. “What was Chaco? Opinions vary widely, perhaps wildly. Interpretations range from a valley of peaceful farming villages to the monumental capital of an empire,” wrote Stephen Lekson, a professor at the University of Colorado Boulder, in an article published in the book *The Architecture of Chaco Canyon, New Mexico* (University of Utah Press, 2007).

Lekson noted that there are different interpretations among archaeologists as to what the Great Houses were. Some archaeologists believe that they were villages inhabited by thousands of people, while others think that they were elite residences that housed a small number of residents.

22. Which of the following best fits in the numbered space in the text?

- | | |
|--|---|
| A) While archaeologists are not certain what caused this dramatic population bump | C) Since Chaco’s national monument status may not protect it from development pressures |
| B) When thinking about archaeological sites, we tend to think of them as dead silent | D) The people of the Chaco Culture did not use a writing system and as such |

23. Which of the following statements can we know from the text?

- | | |
|--|---|
| A) Most descendants of ancient Chaco people live in New Mexico now. | C) The people of the Chaco culture were good at foreign trade. |
| B) “Great Houses” were built from approximately the 9th to 13th century A.D. | D) Archaeologists hold different ideas about how the people of the Chaco Culture lived. |

Questions 24-31 (Suggested completion time: 30 minutes)

Directions: *Read three passages about selfie. Answer the questions according to the passages.*

Passage A

Remember selfies? They became a global cultural obsession in 2012, when *Time* magazine made “selfie” one of its top 10 buzzwords of the year. For a while, it seemed the selfie was the pop art of the future. Everyone, from teenagers to prime ministers, was taking them, everywhere. The invention of the selfie stick turned the taking of selfies into an even stranger performance.

Then, by the end of 2015, selfies slunk back into the subcultural margins. People still took them, but with an embarrassed shrug. There was no longer anything cool about inanely grinning into your own camera. Selfie sticks were banned in many places, and sneered at everywhere. *Time* magazine declared the trend over with its RIP (Rest In Peace) Selfie cover.

Will we really ***be writing obituaries for the selfie?*** I hope so. There are real signs that fashion is turning against this gleefully superficial perversion of portraiture.

Prince Harry called time on the selfie craze in April 2015. When a teenager asked him to pose for one with her in Australia he replied: “No, I hate selfies ... I know you’ re young, but selfies are bad. Just take a normal photograph.”

Good for Harry—it’ s time more people spoke out against this great silliness of our time. The royal repudiation of the selfie followed hot on the heels of a powerful attack on the selfie age by the great historian Simon Schama. Launching what sounds like a fascinating project about the British portrait, Schama ridiculed the idea that the “quick dumbness” of selfies has anything in common with the true art of portraiture. “What we love about selfies and phones is that it’ s of the moment,” he said, “_____28_____.”

I agree. It is depressing that we’ ve turned self-portraiture, the most intense, worrying and neurotic of arts, into a big collective joke. Anyone who can look at their face without anxiety is not looking at their face. The self portrait for Van Gogh and Picasso was a thing of fear and dread: we’ ve taken that dread and airbrushed it out of existence. Selfies deny and erase a fundamental human self-consciousness. We are in danger of losing our sense of awkwardness, embarrassment, of being an individual. The selfie is actually an attack on the moral self.

The widespread delusion that selfies have anything in common with real portraits—that when Rembrandt painted his own image he was somehow daubing a “selfie” —is a tragic attempt to reduce the most profound human experiences to total banality.

I applaud Schama and Harry for their denunciations of this idiotic travesty of the human image. And I suspect they have chosen their moments well. Selfie-takers—partly because of the absurd selfie stick—are starting to stand out from the crowd. Obsessive selfie enthusiasm will soon be seen as the trainspotting of the techno age. Let’ s stigmatize it further. Take selfies if you dare—the world is laughing at you.

Passage B

It is a show that includes painstakingly executed self-portraits by Rembrandt, Van Gogh, and Frida Kahlo, as well as rather more spontaneous selfie portraits by Kim Kardashian, Tom Cruise and a macaque monkey from the Indonesian island of Sulawesi.

The images are being displayed together in London's Saatchi gallery, and while the curators are not assigning them any aesthetic equivalence, they do argue that there is a direct line from one to the other. The gallery is staging what it believes is the first exhibition exploring the history of the selfie, from the 16th century to the present day.

The exhibition argues that what we think of as a selfie—taking our own picture with our own camera—is not entirely new. Photographs in the show include Stanley Kubrick looking intently into a mirror as he takes a photograph of himself, and George Harrison taking a picture of himself in front of the Taj Mahal in 1966.

The very first selfie is named as one from December 1920 of five moustachioed men in hats and suits on a New York rooftop cheerfully holding aloft a briefcase-sized camera at arm's length. Little could they imagine a world when more than a million selfies are taken every day, often in alarming circumstances—diving with sharks, being chased by bulls, or during an illegal climb up an outrageously tall building.

Examples of all those are on display at the Saatchi, as well as celebrity photo bombs and memorable selfies such as the one taken by Barack Obama with David Cameron and the Danish prime minister Helle Thorning-Schmidt.

Also in the show are works by young British photographers—all given a smartphone by the show's sponsor Huawei to take new works—and the shortlisted contenders for a competition in which 14,000 selfies were entered.

Nigel Hurst, the gallery chief executive, hopes the show will be seen as fun as well as exploring more serious themes. "Art galleries can still be pretty intimidating places, and our role is really simple—it is to bring contemporary art and how visual imagery is now being made to as wide an audience as possible. Something like a selfie is a very good entry point."

He admits that some people hate selfies, seeing them as inane, but argues that they should embrace them. "I'm going to make a confession. Until the day before yesterday, I'd never

taken a selfie. It is a generational thing. My kids give me a hard time about it ... but you run with something, then it runs with you.

"The selfie is by far the most expansionist form of visual self-expression, whether you like it or not ..._____29_____."

Passage C

Here are some basic etiquette tips for selfies:

1. Get permission. If you want to take a photo of yourself, with no one else in the picture, by all means, go ahead. However, if someone else is in it, make sure the other person is okay with it. Let her know what you plan to do with it and stick to your plan. Don't post anywhere different without her permission.
2. Safety comes first. Never take a selfie in a situation that can put your life or health in danger. For example, you may think you look really cool driving along the highway with the window open, your hair blowing in the breeze. If you pull out your camera to shoot a selfie, you're putting not only your own life in danger, you're risking anyone else who just happens to be on the road.
3. Don't succumb to bad taste for humor's sake. If you are in a situation that you think is funny, stop and consider how it will appear to others. Never take a selfie in a public restroom where someone else may be in an embarrassing position or situation.
4. Be respectful. Be mindful of where you are. For example, if you are at a holocaust museum, taking a selfie in front of an exhibit shows a lack of respect for those whose lives were lost in this horrific era. People's emotions are still raw over what happened, and they are likely to be that way for centuries. There are places where selfies are never appropriate, including a funeral, ICU or critical care unit in a hospital, and a disaster site where people died.
5. Show kindness. When you see someone who is less fortunate than you, don't stop and pose for a selfie. Instead, do something nice like give a blanket to a homeless man, offer to get something off a top shelf for a handicapped person, or hold a door for a young mom struggling with toddlers and packages.
6. Don't overdo selfies in social media. If you want to snap photos of yourself waking up, eating your morning cereal, working out at the gym, walking into your cubicle, having lunch with friends, leaving work at the end of the day, and having drinks with friends, go right ahead. Just don't think everyone wants to see every single aspect of your day. Choose one good one (preferably one that is interesting to someone other than you and your mama) and post it. If you do more, people may see you as narcissistic.

24. Without changing the meaning, the phrase be writing obituaries for the selfie in Passage A can be replaced by _____.

- A) be composing articles against the selfie C) be issuing guidelines for taking the selfie B) be making statements about the selfie abuse D) be pronouncing the end of the selfie age

25. According to Passage A, what is the author's opinion on taking selfies?

- A) Taking selfies with a stick is dangerous. B) It is a waste of time to take selfies. C) Selfies by artists are real portraits. D) Selfie-taking should not be encouraged.

26. Which of the following statements is NOT true in describing the works displayed in the exhibition in London' s Saatchi gallery?

- A) One can find the first selfie of the world in the exhibition. C) The self-portraits by some world-famous artists are displayed.
B) The works by young British photographers are created with smartphones. D) The selfies displayed are made by either celebrities or artists.

27. According to Nigel Hurst, the gallery chief executive, the aim of the exhibition is _____.

- A) to explore and record the history of selfie B) to attract the public to the gallery C) to bring visual imagery to a wider audience D) to advocate the selfie as a modern art form

28. 28-29. Which two of the following statements about selfies and art best fit in the numbered spaces in Passage A and Passage B respectively?

- A. it embodies the essence of art
B. but the true object of art is endurance
C. the art world cannot really afford to ignore it
D. and the moment will become an artwork
E. the authentic artists will never do selfies

30. According to Passage C, if you post too many selfies on social media platforms, you may be regarded as a person who _____.

- A) is devoted to photography C) disrespects others' privacy
B) indulges oneself with social media D) excessively admires oneself

31. Which of the etiquette tips do the following selfies not follow respectively?

	Picture 1: President Obama snaps a selfie at Mandela’ s memorial service.		Picture 2: A Turkish police officer took a selfie while a person committed suicide in the background by jumping off a bridge.		Picture 3: A woman perches on a window ledge in Tokyo to take a selfie
---	---	---	---	---	--

- A) Tip2, Tip3, and Tip5. B) Tip4, Tip4, and Tip2.
C) Tip4, Tip5, and Tip2. D) Tip2, Tip1, and Tip5.

Question 32 (Suggested completion time: 40 minutes)

Directions: *Read a passage from Taking Sides. Write a short essay according to the passage.*

There are two ways to examine rapid urbanization. One approach is to examine the adverse impacts of the urbanized area on the environment. Second, one can study the ability of society to provide services to the urban population. The best place to begin a discussion of urbanization’ s effects is found in “An Urbanizing World” (Martin P. Bockerhoff, *Population Bulletin*, Population Reference Bureau, 2000). According to Bockerhoff, increasing urbanization in the poor countries can be seen “as a welcome or as an alarming trend.” He suggests that cities have been the “engines of economic development and the centers of industry and commerce.” The diffusion of ideas is best found in cities around the world. And Bockerhoff observes the governmental cost savings of delivering goods and services to those in more densely populated environments.

The basic question of urbanization’ s goodness or badness relates to its impact on the poverty level of its inhabitants because poverty is at the heart of the ability of its owners to address ills caused by the social phenomenon, in this case, urbanization. The evidence is becoming clearer that poverty “is becoming more urban” (Gordon McGranahan and Edgar Pieterse, “Getting Urbanization Right: A defining Development Challenge for the 21st Century”). These authors suggest that if present trends continue, about half of global citizens living on less than one dollar per day will be urban dwellers. The number of people living in urban slums—housing with serious deficiencies in water supplies and sanitary facilities and crowded conditions—is

increasing.

Urban poverty, of course, has a direct impact in turn on urban health. Although rural health tends to be worse than urban health, the poverty, environmental degradation, and population demands of urbanization pose significant health risks. Melinda Moore and colleagues ("Global Urbanization and Impact on Health") suggest a range of health hazards and risks: "substandard housing, crowding, air pollution, insufficient or contaminated drinking water, inadequate sanitation and solid waste disposal services, vector-borne diseases, industrial waste, increased motor vehicle traffic, stress associated with poverty and unemployment, among others."

There is a more recent concern emerging among researchers about urbanization' s impact—this time on biodiversity. One study concludes, for example, that urban sprawl in the United States endangers more species than any other human behavior (Michael L. McKinney, "Urbanization, Biodiversity, and Conservation," *Bioscience*, 2002). A 2008 study by the Nature Conservancy and Harvard University concluded that failure to improve urban planning would lead to losing "some animals, plants and natural resources for good." The highest concentrations of endemic species are found in natural areas affected by urban growth. Eight percent of vertebrate species have been marked as endangered because of the impact of urban growth.

Write a short essay of about 300 words based on your understanding of the passage. Remember to write in your OWN words. Your essay should respond to the following questions:

- 1) What do you think is the main issue that the author explores? Please describe the aspects from which the author illustrates the main issue.
- 2) To what extent do you agree or disagree with the author on this issue and why?
